The Meaning of Truth

I

THE FUNCTION OF COGNITION [Footnote: Read before the Aristotelian Society, December 1, 1884, and first published in *Mind*, vol. x (1885).—This, and the following articles have received a very slight verbal revision, consisting mostly in the omission of redundancy.]

The following inquiry is (to use a distinction familiar to readers of Mr. Shadworth Hodgson) not an inquiry into the 'how it comes,' but into the 'what it is' of cognition. What we call acts of cognition are evidently realized through what we call brains and their events, whether there be 'souls' dynamically connected with the brains or not. But with neither brains nor souls has this essay any business to transact. In it we shall simply assume that cognition IS produced, somehow, and limit ourselves to asking what elements it contains, what factors it implies.

Cognition is a function of consciousness. The first factor it implies is therefore a state of consciousness wherein the cognition shall take place. Having elsewhere used the word 'feeling' to designate generically all states of consciousness considered subjectively, or without respect to their possible

function, I shall then say that, whatever elements an act of cognition may imply besides, it at least implies the existence of a FEELING. [If the reader share the current antipathy to the word 'feeling,' he may substitute for it, wherever I use it, the word 'idea,' taken in the old broad Lockian sense, or he may use the clumsy phrase 'state of consciousness,' or finally he may say 'thought' instead.]

Now it is to be observed that the common consent of mankind has agreed that some feelings are cognitive and some are simple facts having a subjective, or, what one might almost call a physical, existence, but no such self-transcendent function as would be implied in their being pieces of knowledge. Our task is again limited here. We are not to ask, 'How is self-transcendence possible?' We are only to ask, 'How comes it that common sense has assigned a number of cases in which it is assumed not only to be possible but actual? And what are the marks used by common sense to distinguish those cases from the rest?' In short, our inquiry is a chapter in descriptive psychology,—hardly anything more.

Condillac embarked on a quest similar to this by his famous hypothesis of a statue to which various feelings were successively imparted. Its first feeling was supposed to be one of fragrance. But to avoid all possible complication with the question of genesis, let us not attribute even to a statue the possession of our imaginary feeling. Let us rather suppose it attached to no matter, nor localized at any point in space, but left swinging IN VACUO,

as it were, by the direct creative FIAT of a god. And let us also, to escape entanglement with difficulties about the physical or psychical nature of its 'object' not call it a feeling of fragrance or of any other determinate sort, but limit ourselves to assuming that it is a feeling of Q. What is true of it under this abstract name will be no less true of it in any more particular shape (such as fragrance, pain, hardness) which the reader may suppose.

Now, if this feeling of Q be the only creation of the god, it will of course form the entire universe. And if, to escape the cavils of that large class of persons who believe that SEMPER IDEM SENTIRE AC NON SENTIRE are the same, [Footnote:1 'The Relativity of Knowledge,' held in this sense, is, it may be observed in passing, one of the oddest of philosophic superstitions. Whatever facts may be cited in its favor are due to the properties of nerve-tissue, which may be exhausted by too prolonged an excitement. Patients with neuralgias that last unremittingly for days can, however, assure us that the limits of this nerve-law are pretty widely drawn. But if we physically could get a feeling that should last eternally unchanged, what atom of logical or psychological argument is there to prove that it would not be felt as long as it lasted, and felt for just what it is, all that time? The reason for the opposite prejudice seems to be our reluctance to think that so stupid a thing as such a feeling would necessarily be, should be allowed to fill eternity with its presence. An interminable acquaintance, leading to no knowledge-about, —such would be its condition.] we allow the feeling to be of as

short a duration as they like, that universe will only need to last an infinitesimal part of a second. The feeling in question will thus be reduced to its fighting weight, and all that befalls it in the way of a cognitive function must be held to befall in the brief instant of its quickly snuffed-out life,—a life, it will also be noticed, that has no other moment of consciousness either preceding or following it.

Well now, can our little feeling, thus left alone in the universe,—for the god and we psychological critics may be supposed left out of the account,—can the feeling, I say, be said to have any sort of a cognitive function? For it to KNOW, there must be something to be known. What is there, on the present supposition? One may reply, 'the feeling's content q.' But does it not seem more proper to call this the feeling's QUALITY than its content? Does not the word 'content' suggest that the feeling has already dirempted itself as an act from its content as an object? And would it be quite safe to assume so promptly that the quality q of a feeling is one and the same thing with a feeling of the quality q? The quality q, so far, is an entirely subjective fact which the feeling carries so to speak endogenously, or in its pocket. If any one pleases to dignify so simple a fact as this by the name of knowledge, of course nothing can prevent him. But let us keep closer to the path of common usage, and reserve the name knowledge for the cognition of 'realities,' meaning by realities things that exist independently of the feeling through which their cognition occurs. If the content of the feeling occur nowhere

in the universe outside of the feeling itself, and perish with the feeling, common usage refuses to call it a reality, and brands it as a subjective feature of the feeling's constitution, or at the most as the feeling's DREAM.

For the feeling to be cognitive in the specific sense, then, it must be self-transcendent; and we must prevail upon the god to CREATE A REALITY OUTSIDE OF IT to correspond to its intrinsic quality Q. Thus only can it be redeemed from the condition of being a solipsism. If now the new created reality RESEMBLE the feeling's quality Q I say that the feeling may be held by us TO BE COGNIZANT OF THAT REALITY.

This first instalment of my thesis is sure to be attacked. But one word before defending it 'Reality' has become our warrant for calling a feeling cognitive; but what becomes our warrant for calling anything reality? The only reply is—the faith of the present critic or inquirer. At every moment of his life he finds himself subject to a belief in SOME realities, even though his realities of this year should prove to be his illusions of the next. Whenever he finds that the feeling he is studying contemplates what he himself regards as a reality, he must of course admit the feeling itself to be truly cognitive. We are ourselves the critics here; and we shall find our burden much lightened by being allowed to take reality in this relative and provisional way. Every science must make some assumptions. Erkenntnisstheoretiker are but fallible mortals. When they study the function of cognition, they do it by means of the same

function in themselves. And knowing that the fountain cannot go higher than its source, we should promptly confess that our results in this field are affected by our own liability to err. THE MOST WE CAN CLAIM IS, THAT WHAT WE SAY ABOUT COGNITION MAY BE COUNTED AS TRUE AS WHAT WE SAY ABOUT ANYTHING ELSE. If our hearers agree with us about what are to be held 'realities,' they will perhaps also agree to the reality of our doctrine of the way in which they are known. We cannot ask for more.

Our terminology shall follow the spirit of these remarks. We will deny the function of knowledge to any feeling whose quality or content we do not ourselves believe to exist outside of that feeling as well as in it. We may call such a feeling a dream if we like; we shall have to see later whether we can call it a fiction or an error.

To revert now to our thesis. Some persons will immediately cry out, 'How CAN a reality resemble a feeling?' Here we find how wise we were to name the quality of the feeling by an algebraic letter Q. We flank the whole difficulty of resemblance between an inner state and an outward reality, by leaving it free to any one to postulate as the reality whatever sort of thing he thinks CAN resemble a feeling,—if not an outward thing, then another feeling like the first one,—the mere feeling Q in the critic's mind for example. Evading thus this objection, we turn to another which is sure to be urged.

It will come from those philosophers to whom 'thought,' in

the sense of a knowledge of relations, is the all in all of mental life; and who hold a merely feeling consciousness to be no better—one would sometimes say from their utterances, a good deal worse—than no consciousness at all. Such phrases as these, for example, are common to-day in the mouths of those who claim to walk in the footprints of Kant and Hegel rather than in the ancestral English paths: 'A perception detached from all others, "left out of the heap we call a mind," being out of all relation, has no qualities—is simply nothing. We can no more consider it than we can see vacancy.' 'It is simply in itself fleeting, momentary, unnameable (because while we name it it has become another), and for the very same reason unknowable, the very negation of knowability.' 'Exclude from what we have considered real all qualities constituted by relation, we find that none are left.'

Altho such citations as these from the writings of Professor Green might be multiplied almost indefinitely, they would hardly repay the pains of collection, so egregiously false is the doctrine they teach. Our little supposed feeling, whatever it may be, from the cognitive point of view, whether a bit of knowledge or a dream, is certainly no psychical zero. It is a most positively and definitely qualified inner fact, with a complexion all its own. Of course there are many mental facts which it is NOT. It knows Q, if Q be a reality, with a very minimum of knowledge. It neither dates nor locates it. It neither classes nor names it. And it neither knows itself as a feeling, nor contrasts itself with other feelings, nor estimates its own duration or intensity. It is, in short, if there

is no more of it than this, a most dumb and helpless and useless kind of thing.

But if we must describe it by so many negations, and if it can say nothing ABOUT itself or ABOUT anything else, by what right do we deny that it is a psychical zero? And may not the 'relationists' be right after all?

In the innocent looking word 'about' lies the solution of this riddle; and a simple enough solution it is when frankly looked at. A quotation from a too seldom quoted book, the *Exploratio Philosophica* of John Grote (London, 1865), p. 60, will form the best introduction to it.

'Our knowledge,' writes Grote, 'may be contemplated in either of two ways, or, to use other words, we may speak in a double manner of the "object" of knowledge. That is, we may either use language thus: we KNOW a thing, a man, etc.; or we may use it thus: we know such and such things ABOUT the thing, the man, etc. Language in general, following its true logical instinct, distinguishes between these two applications of the notion of knowledge, the one being *yvwvai*, *noscere*, *kennen*, *connaitre*, the other being *eidevai*, *scire*, *wissen*, *savoir*. In the origin, the former may be considered more what I have called phenomenal—it is the notion of knowledge as ACQUAINTANCE or familiarity with what is known; which notion is perhaps more akin to the phenomenal bodily communication, and is less purely intellectual than the other; it is the kind of knowledge which we have of a thing by the presentation to the senses or the

representation of it in picture or type, a *Vorstellung*. The other, which is what we express in judgments or propositions, what is embodied in *Begriffe* or concepts without any necessary imaginative representation, is in its origin the more intellectual notion of knowledge. There is no reason, however, why we should not express our knowledge, whatever its kind, in either manner, provided only we do not confusedly express it, in the same proposition or piece of reasoning, in both.'

Now obviously if our supposed feeling of Q is (if knowledge at all) only knowledge of the mere acquaintance-type, it is milking a he-goat, as the ancients would have said, to try to extract from it any deliverance ABOUT anything under the sun, even about itself. And it is as unjust, after our failure, to turn upon it and call it a psychical nothing, as it would be, after our fruitless attack upon the billy-goat, to proclaim the non-lactiferous character of the whole goat-tribe. But the entire industry of the Hegelian school in trying to shove simple sensation out of the pale of philosophic recognition is founded on this false issue. It is always the 'speechlessness' of sensation, its inability to make any 'statement,' [Footnote: See, for example, Green's Introduction to Hume's *Treatise of Human Nature*, p. 36.] that is held to make the very notion of it meaningless, and to justify the student of knowledge in scouting it out of existence. 'Significance,' in the sense of standing as the sign of other mental states, is taken to be the sole function of what mental states we have; and from the perception that our little primitive sensation has as yet no

significance in this literal sense, it is an easy step to call it first meaningless, next senseless, then vacuous, and finally to brand it as absurd and inadmissible. But in this universal liquidation, this everlasting slip, slip, slip, of direct acquaintance into knowledge-ABOUT, until at last nothing is left about which the knowledge can be supposed to obtain, does not all 'significance' depart from the situation? And when our knowledge about things has reached its never so complicated perfection, must there not needs abide alongside of it and inextricably mixed in with it some acquaintance with WHAT things all this knowledge is about?

Now, our supposed little feeling gives a WHAT; and if other feelings should succeed which remember the first, its WHAT may stand as subject or predicate of some piece of knowledge-about, of some judgment, perceiving relations between it and other WHATS which the other feelings may know. The hitherto dumb Q will then receive a name and be no longer speechless. But every name, as students of logic know, has its 'denotation'; and the denotation always means some reality or content, relationless as extra or with its internal relations unanalyzed, like the Q which our primitive sensation is supposed to know. No relation-expressing proposition is possible except on the basis of a preliminary acquaintance with such 'facts,' with such contents, as this. Let the Q be fragrance, let it be toothache, or let it be a more complex kind of feeling, like that of the full-moon swimming in her blue abyss, it must first come in that simple shape, and be held fast in that first intention, before any

knowledge ABOUT it can be attained. The knowledge ABOUT it is IT with a context added. Undo IT, and what is added cannot be CONtext. [Footnote: If A enters and B exclaims, 'Didn't you see my brother on the stairs?' we all hold that A may answer, 'I saw him, but didn't know he was your brother'; ignorance of brotherhood not abolishing power to see. But those who, on account of the unrelatedness of the first facts with which we become acquainted, deny them to be 'known' to us, ought in consistency to maintain that if A did not perceive the relationship of the man on the stairs to B, it was impossible he should have noticed him at all.]

Let us say no more then about this objection, but enlarge our thesis, thus: If there be in the universe a Q other than the Q in the feeling, the latter may have acquaintance with an entity ejective to itself; an acquaintance moreover, which, as mere acquaintance, it would be hard to imagine susceptible either of improvement or increase, being in its way complete; and which would oblige us (so long as we refuse not to call acquaintance knowledge) to say not only that the feeling is cognitive, but that all qualities of feeling, SO LONG AS THERE IS ANYTHING OUTSIDE OF THEM WHICH THEY RESEMBLE, are feelings OF qualities of existence, and perceptions of outward fact.

The point of this vindication of the cognitive function of the first feeling lies, it will be noticed, in the discovery that q does exist elsewhere than in it. In case this discovery were not

made, we could not be sure the feeling was cognitive; and in case there were nothing outside to be discovered, we should have to call the feeling a dream. But the feeling itself cannot make the discovery. Its own *q* is the only *q* it grasps; and its own nature is not a particle altered by having the self-transcendent function of cognition either added to it or taken away. The function is accidental; synthetic, not analytic; and falls outside and not inside its being. [Footnote: It seems odd to call so important a function accidental, but I do not see how we can mend the matter. Just as, if we start with the reality and ask how it may come to be known, we can only reply by invoking a feeling which shall RECONSTRUCT it in its own more private fashion; so, if we start with the feeling and ask how it may come to know, we can only reply by invoking a reality which shall RECONSTRUCT it in its own more public fashion. In either case, however, the datum we start with remains just what it was. One may easily get lost in verbal mysteries about the difference between quality of feeling and feeling of quality, between receiving and reconstructing the knowledge of a reality. But at the end we must confess that the notion of real cognition involves an unmediated dualism of the knower and the known. See Bowne's *Metaphysics*, New York, 1882, pp. 403-412, and various passages in Lotze, e.g., *Logic*, Sec. 308. ['Unmediated' is a bad word to have used.—1909.]]

A feeling feels as a gun shoots. If there be nothing to be felt or hit, they discharge themselves *ins blaue hinein*. If, however, something starts up opposite them, they no longer simply shoot

or feel, they hit and know.

But with this arises a worse objection than any yet made. We the critics look on and see a real *q* and a feeling of *q*; and because the two resemble each other, we say the one knows the other. But what right have we to say this until we know that the feeling of *q* means to stand for or represent just that SAME other *q*? Suppose, instead of one *q*, a number of real *q*'s in the field. If the gun shoots and hits, we can easily see which one of them it hits. But how can we distinguish which one the feeling knows? It knows the one it stands for. But which one DOES it stand for? It declares no intention in this respect. It merely resembles; it resembles all indifferently; and resembling, per se, is not necessarily representing or standing-for at all. Eggs resemble each other, but do not on that account represent, stand for, or know each other. And if you say this is because neither of them is a FEELING, then imagine the world to consist of nothing but toothaches, which ARE feelings, feelings resembling each other exactly,—would they know each other the better for all that?

The case of *q* being a bare quality like that of toothache-pain is quite different from that of its being a concrete individual thing. There is practically no test for deciding whether the feeling of a bare quality means to represent it or not. It can DO nothing to the quality beyond resembling it, simply because an abstract quality is a thing to which nothing can be done. Being without context or environment or principium individuationis, a quiddity

with no haecceity, a platonic idea, even duplicate editions of such a quality (were they possible), would be indiscernible, and no sign could be given, no result altered, whether the feeling I meant to stand for this edition or for that, or whether it simply resembled the quality without meaning to stand for it at all.

If now we grant a genuine pluralism of editions to the quality q, by assigning to each a CONTEXT which shall distinguish it from its mates, we may proceed to explain which edition of it the feeling knows, by extending our principle of resemblance to the context too, and saying the feeling knows the particular q whose context it most exactly duplicates. But here again the theoretic doubt recurs: duplication and coincidence, are they knowledge? The gun shows which q it points to and hits, by BREAKING it. Until the feeling can show us which q it points to and knows, by some equally flagrant token, why are we not free to deny that it either points to or knows any one of the REAL q's at all, and to affirm that the word 'resemblance' exhaustively describes its relation to the reality?

Well, as a matter of fact, every actual feeling DOES show us, quite as flagrantly as the gun, which q it points to; and practically in concrete cases the matter is decided by an element we have hitherto left out. Let us pass from abstractions to possible instances, and ask our obliging deus ex machina to frame for us a richer world. Let him send me, for example, a dream of the death of a certain man, and let him simultaneously cause the man to die. How would our practical instinct spontaneously

decide whether this were a case of cognition of the reality, or only a sort of marvellous coincidence of a resembling reality with my dream? Just such puzzling cases as this are what the 'society for psychical research' is busily collecting and trying to interpret in the most reasonable way.

If my dream were the only one of the kind I ever had in my life, if the context of the death in the dream differed in many particulars from the real death's context, and if my dream led me to no action about the death, unquestionably we should all call it a strange coincidence, and naught besides. But if the death in the dream had a long context, agreeing point for point with every feature that attended the real death; if I were constantly having such dreams, all equally perfect, and if on awaking I had a habit of ACTING immediately as if they were true and so getting 'the start' of my more tardily instructed neighbors,—we should in all probability have to admit that I had some mysterious kind of clairvoyant power, that my dreams in an inscrutable way meant just those realities they figured, and that the word 'coincidence' failed to touch the root of the matter. And whatever doubts any one preserved would completely vanish, if it should appear that from the midst of my dream I had the power of INTERFERING with the course of the reality, and making the events in it turn this way or that, according as I dreamed they should. Then at least it would be certain that my waking critics and my dreaming self were dealing with the SAME.

And thus do men invariably decide such a question.

THE FALLING OF THE DREAM'S PRACTICAL CONSEQUENCES into the real world, and the EXTENT of the resemblance between the two worlds are the criteria they instinctively use. [Footnote: The thoroughgoing objector might, it is true, still return to the charge, and, granting a dream which should completely mirror the real universe, and all the actions dreamed in which should be instantly matched by duplicate actions in this universe, still insist that this is nothing more than harmony, and that it is as far as ever from being made clear whether the dream-world refers to that other world, all of whose details it so closely copies. This objection leads deep into metaphysics. I do not impugn its importance, and justice obliges me to say that but for the teachings of my colleague, Dr. Josiah Royce, I should neither have grasped its full force nor made my own practical and psychological point of view as clear to myself as it is. On this occasion I prefer to stick steadfastly to that point of view; but I hope that Dr. Royce's more fundamental criticism of the function of cognition may ere long see the light. [I referred in this note to Royce's religious aspect of philosophy, then about to be published. This powerful book maintained that the notion of REFERRING involved that of an inclusive mind that shall own both the real q and the mental q, and use the latter expressly as a representative symbol of the former. At the time I could not refute this transcendentalist opinion. Later, largely through the influence of Professor D. S. Miller (see his essay 'The meaning of truth and error,' in the Philosophical Review for 1893, vol. 2

p. 403) I came to see that any definitely experienceable workings would serve as intermediaries quite as well as the absolute mind's intentions would.]] All feeling is for the sake of action, all feeling results in action,—to-day no argument is needed to prove these truths. But by a most singular disposition of nature which we may conceive to have been different, MY FEELINGS ACT UPON THE REALITIES WITHIN MY CRITIC'S WORLD. Unless, then, my critic can prove that my feeling does not 'point to' those realities which it acts upon, how can he continue to doubt that he and I are alike cognizant of one and the same real world? If the action is performed in one world, that must be the world the feeling intends; if in another world, THAT is the world the feeling has in mind. If your feeling bear no fruits in my world, I call it utterly detached from my world; I call it a solipsism, and call its world a dream-world. If your toothache do not prompt you to ACT as if I had a toothache, nor even as if I had a separate existence; if you neither say to me, 'I know now how you must suffer!' nor tell me of a remedy, I deny that your feeling, however it may resemble mine, is really cognizant of mine. It gives no SIGN of being cognizant, and such a sign is absolutely necessary to my admission that it is.

Before I can think you to mean my world, you must affect my world; before I can think you to mean much of it, you must affect much of it; and before I can be sure you mean it AS I DO, you must affect it JUST AS I SHOULD if I were in your place. Then I, your critic, will gladly believe that we are thinking, not only of

the same reality, but that we are thinking it ALIKE, and thinking of much of its extent.

Without the practical effects of our neighbor's feelings on our own world, we should never suspect the existence of our neighbor's feelings at all, and of course should never find ourselves playing the critic as we do in this article. The constitution of nature is very peculiar. In the world of each of us are certain objects called human bodies, which move about and act on all the other objects there, and the occasions of their action are in the main what the occasions of our action would be, were they our bodies. They use words and gestures, which, if we used them, would have thoughts behind them,—no mere thoughts überhaupt, however, but strictly determinate thoughts. I think you have the notion of fire in general, because I see you act towards this fire in my room just as I act towards it,—poke it and present your person towards it, and so forth. But that binds me to believe that if you feel 'fire' at all, THIS is the fire you feel. As a matter of fact, whenever we constitute ourselves into psychological critics, it is not by dint of discovering which reality a feeling 'resembles' that we find out which reality it means. We become first aware of which one it means, and then we suppose that to be the one it resembles. We see each other looking at the same objects, pointing to them and turning them over in various ways, and thereupon we hope and trust that all of our several feelings resemble the reality and each other. But this is a thing of which we are never theoretically sure. Still, it would practically be

a case of grubelsucht, if a ruffian were assaulting and drubbing my body, to spend much time in subtle speculation either as to whether his vision of my body resembled mine, or as to whether the body he really MEANT to insult were not some body in his mind's eye, altogether other from my own. The practical point of view brushes such metaphysical cobwebs away. If what he have in mind be not MY body, why call we it a body at all? His mind is inferred by me as a term, to whose existence we trace the things that happen. The inference is quite void if the term, once inferred, be separated from its connection with the body that made me infer it, and connected with another that is not mine at all. No matter for the metaphysical puzzle of how our two minds, the ruffian's and mine, can mean the same body. Men who see each other's bodies sharing the same space, treading the same earth, splashing the same water, making the same air resonant, and pursuing the same game and eating out of the same dish, will never practically believe in a pluralism of solipsistic worlds.

Where, however, the actions of one mind seem to take no effect in the world of the other, the case is different. This is what happens in poetry and fiction. Every one knows Ivanhoe, for example; but so long as we stick to the story pure and simple without regard to the facts of its production, few would hesitate to admit that there are as many different Ivanhoes as there are different minds cognizant of the story. [Footnote: That is, there is no REAL 'Ivanhoe,' not even the one in Sir Walter Scott's mind as he was writing the story. That one is only the FIRST one of

the Ivanhoe-solipsisms. It is quite true we can make it the real Ivanhoe if we like, and then say that the other Ivanhoes know it or do not know it, according as they refer to and resemble it or no. This is done by bringing in Sir Walter Scott himself as the author of the real Ivanhoe, and so making a complex object of both. This object, however, is not a story pure and simple. It has dynamic relations with the world common to the experience of all the readers. Sir Walter Scott's Ivanhoe got itself printed in volumes which we all can handle, and to any one of which we can refer to see which of our versions be the true one, i.e., the original one of Scott himself. We can see the manuscript; in short we can get back to the Ivanhoe in Scott's mind by many an avenue and channel of this real world of our experience,—a thing we can by no means do with either the Ivanhoe or the Rebecca, either the Templar or the Isaac of York, of the story taken simply as such, and detached from the conditions of its production. Everywhere, then, we have the same test: can we pass continuously from two objects in two minds to a third object which seems to be in BOTH minds, because each mind feels every modification imprinted on it by the other? If so, the first two objects named are derivatives, to say the least, from the same third object, and may be held, if they resemble each other, to refer to one and the same reality.] The fact that all these Ivanhoes RESEMBLE each other does not prove the contrary. But if an alteration invented by one man in his version were to reverberate immediately through all the other versions, and produce changes

therein, we should then easily agree that all these thinkers were thinking the SAME Ivanhoe, and that, fiction or no fiction, it formed a little world common to them all.

Having reached this point, we may take up our thesis and improve it again. Still calling the reality by the name of q and letting the critic's feeling vouch for it, we can say that any other feeling will be held cognizant of q, provided it both resemble q, and refer to q, as shown by its either modifying q directly, or modifying some other reality, p or r, which the critic knows to be continuous with q. Or more shortly, thus: **THE FEELING OF q KNOWS WHATEVER REALITY IT RESEMBLES, AND EITHER DIRECTLY OR INDIRECTLY OPERATES ON.** If it resemble without operating, it is a dream; if it operate without resembling, it is an error. [Footnote: Among such errors are those cases in which our feeling operates on a reality which it does partially resemble, and yet does not intend: as for instance, when I take up your umbrella, meaning to take my own. I cannot be said here either to know your umbrella, or my own, which latter my feeling more completely resembles. I am mistaking them both, misrepresenting their context, etc.

We have spoken in the text as if the critic were necessarily one mind, and the feeling criticised another. But the criticised feeling and its critic may be earlier and later feelings of the same mind, and here it might seem that we could dispense with the notion of operating, to prove that critic and criticised are referring to and meaning to represent the SAME. We think we see our past

feelings directly, and know what they refer to without appeal. At the worst, we can always fix the intention of our present feeling and MAKE it refer to the same reality to which any one of our past feelings may have referred. So we need no 'operating' here, to make sure that the feeling and its critic mean the same real q. Well, all the better if this is so! We have covered the more complex and difficult case in our text, and we may let this easier one go. The main thing at present is to stick to practical psychology, and ignore metaphysical difficulties.

One more remark. Our formula contains, it will be observed, nothing to correspond to the great principle of cognition laid down by Professor Ferrier in his Institutes of Metaphysic and apparently adopted by all the followers of Fichte, the principle, namely, that for knowledge to be constituted there must be knowledge of the knowing mind along with whatever else is known: not q, as we have supposed, but q PLUS MYSELF, must be the least I can know. It is certain that the common sense of mankind never dreams of using any such principle when it tries to discriminate between conscious states that are knowledge and conscious states that are not. So that Ferrier's principle, if it have any relevancy at all, must have relevancy to the metaphysical possibility of consciousness at large, and not to the practically recognized constitution of cognitive consciousness. We may therefore pass it by without further notice here.] It is to be feared that the reader may consider this formula rather insignificant and obvious, and hardly worth the labor of so many pages, especially

when he considers that the only cases to which it applies are percepts, and that the whole field of symbolic or conceptual thinking seems to elude its grasp. Where the reality is either a material thing or act, or a state of the critic's consciousness, I may both mirror it in my mind and operate upon it—in the latter case indirectly, of course—as soon as I perceive it. But there are many cognitions, universally allowed to be such, which neither mirror nor operate on their realities.

In the whole field of symbolic thought we are universally held both to intend, to speak of, and to reach conclusions about—to know in short—particular realities, without having in our subjective consciousness any mind-stuff that resembles them even in a remote degree. We are instructed about them by language which awakens no consciousness beyond its sound; and we know WHICH realities they are by the faintest and most fragmentary glimpse of some remote context they may have and by no direct imagination of themselves. As minds may differ here, let me speak in the first person. I am sure that my own current thinking has WORDS for its almost exclusive subjective material, words which are made intelligible by being referred to some reality that lies beyond the horizon of direct consciousness, and of which I am only aware as of a terminal MORE existing in a certain direction, to which the words might lead but do not lead yet. The SUBJECT, or TOPIC, of the words is usually something towards which I mentally seem to pitch them in a backward way, almost as I might jerk my thumb over my shoulder to point at

something, without looking round, if I were only entirely sure that it was there. The UPSHOT, or CONCLUSION, of the words is something towards which I seem to incline my head forwards, as if giving assent to its existence, tho all my mind's eye catches sight of may be some tatter of an image connected with it, which tatter, however, if only endued with the feeling of familiarity and reality, makes me feel that the whole to which it belongs is rational and real, and fit to be let pass.

Here then is cognitive consciousness on a large scale, and yet what it knows, it hardly resembles in the least degree. The formula last laid down for our thesis must therefore be made more complete. We may now express it thus: A PERCEPT KNOWS WHATEVER REALITY IT DIRECTLY OR INDIRECTLY OPERATES ON AND RESEMBLES; A CONCEPTUAL FEELING, OR THOUGHT KNOWS A REALITY, WHENEVER IT ACTUALLY OR POTENTIALLY TERMINATES IN A PERCEPT THAT OPERATES ON, OR RESEMBLES THAT REALITY, OR IS OTHERWISE CONNECTED WITH IT OR WITH ITS CONTEXT. The latter percept may be either sensation or sensorial idea; and when I say the thought must TERMINATE in such a percept, I mean that it must ultimately be capable of leading up thereto,—by the way of practical [missing section] is an incomplete 'thought about' that reality, that reality is its 'topic,' etc. experience, if the terminal feeling be a sensation; by the way of logical or habitual suggestion, if it be only an image in the

mind.

Let an illustration make this plainer. I open the first book I take up, and read the first sentence that meets my eye: 'Newton saw the handiwork of God in the heavens as plainly as Paley in the animal kingdom.' I immediately look back and try to analyze the subjective state in which I rapidly apprehended this sentence as I read it. In the first place there was an obvious feeling that the sentence was intelligible and rational and related to the world of realities. There was also a sense of agreement or harmony between 'Newton,' 'Paley,' and 'God.' There was no apparent image connected with the words 'heavens,' or 'handiwork,' or 'God'; they were words merely. With 'animal kingdom' I think there was the faintest consciousness (it may possibly have been an image of the steps) of the Museum of Zoology in the town of Cambridge where I write. With 'Paley' there was an equally faint consciousness of a small dark leather book; and with 'Newton' a pretty distinct vision of the right-hand lower corner of curling periwig. This is all the mind-stuff I can discover in my first consciousness of the meaning of this sentence, and I am afraid that even not all of this would have been present had I come upon the sentence in a genuine reading of the book, and not picked it out for an experiment. And yet my consciousness was truly cognitive. The sentence is 'about realities' which my psychological critic—for we must not forget him—acknowledges to be such, even as he acknowledges my distinct feeling that they ARE realities, and my acquiescence in

the general rightness of what I read of them, to be true knowledge on my part.

Now what justifies my critic in being as lenient as this? This singularly inadequate consciousness of mine, made up of symbols that neither resemble nor affect the realities they stand for,—how can he be sure it is cognizant of the very realities he has himself in mind?

He is sure because in countless like cases he has seen such inadequate and symbolic thoughts, by developing themselves, terminate in percepts that practically modified and presumably resembled his own. By 'developing' themselves is meant obeying their tendencies, following up the suggestions nascently present in them, working in the direction in which they seem to point, clearing up the penumbra, making distinct the halo, unravelling the fringe, which is part of their composition, and in the midst of which their more substantive kernel of subjective content seems consciously to lie. Thus I may develop my thought in the Paley direction by procuring the brown leather volume and bringing the passages about the animal kingdom before the critic's eyes. I may satisfy him that the words mean for me just what they mean for him, by showing him IN CONCRETO the very animals and their arrangements, of which the pages treat. I may get Newton's works and portraits; or if I follow the line of suggestion of the wig, I may smother my critic in seventeenth-century matters pertaining to Newton's environment, to show that the word 'Newton' has the same LOCUS and relations in both our

minds. Finally I may, by act and word, persuade him that what I mean by God and the heavens and the analogy of the handiworks, is just what he means also.

My demonstration in the last resort is to his SENSES. My thought makes me act on his senses much as he might himself act on them, were he pursuing the consequences of a perception of his own. Practically then MY thought terminates in HIS realities. He willingly supposes it, therefore, to be OF them, and inwardly to RESEMBLE what his own thought would be, were it of the same symbolic sort as mine. And the pivot and fulcrum and support of his mental persuasion, is the sensible operation which my thought leads me, or may lead, to effect—the bringing of Paley's book, of Newton's portrait, etc., before his very eyes.

In the last analysis, then, we believe that we all know and think about and talk about the same world, because WE BELIEVE OUR PERCEPTS ARE POSSESSED BY US IN COMMON. And we believe this because the percepts of each one of us seem to be changed in consequence of changes in the percepts of someone else. What I am for you is in the first instance a percept of your own. Unexpectedly, however, I open and show you a book, uttering certain sounds the while. These acts are also your percepts, but they so resemble acts of yours with feelings prompting them, that you cannot doubt I have the feelings too, or that the book is one book felt in both our worlds. That it is felt in the same way, that my feelings of it resemble yours, is something of which we never can be sure, but which we assume as the

simplest hypothesis that meets the case. As a matter of fact, we never ARE sure of it, and, as ERKENNTNISSTHEORETIKER, we can only say that of feelings that should NOT resemble each other, both could not know the same thing at the same time in the same way. [Footnote: Though both might terminate in the same thing and be incomplete thoughts 'about' it.] If each holds to its own percept as the reality, it is bound to say of the other percept, that, though it may INTEND that reality, and prove this by working change upon it, yet, if it do not resemble it, it is all false and wrong. [Footnote: The difference between Idealism and Realism is immaterial here. What is said in the text is consistent with either theory. A law by which my percept shall change yours directly is no more mysterious than a law by which it shall first change a physical reality, and then the reality change yours. In either case you and I seem knit into a continuous world, and not to form a pair of solipsisms.]

If this be so of percepts, how much more so of higher modes of thought! Even in the sphere of sensation individuals are probably different enough. Comparative study of the simplest conceptual elements seems to show a wider divergence still. And when it comes to general theories and emotional attitudes towards life, it is indeed time to say with Thackeray, 'My friend, two different universes walk about under your hat and under mine.'

What can save us at all and prevent us from flying asunder into a chaos of mutually repellent solipsisms? Through what can

our several minds commune? Through nothing but the mutual resemblance of those of our perceptual feelings which have this power of modifying one another, WHICH ARE MERE DUMB KNOWLEDGES-OF-ACQUAINTANCE, and which must also resemble their realities or not know them aright at all. In such pieces of knowledge-of-acquaintance all our knowledge-about must end, and carry a sense of this possible termination as part of its content. These percepts, these termini, these sensible things, these mere matters-of-acquaintance, are the only realities we ever directly know, and the whole history of our thought is the history of our substitution of one of them for another, and the reduction of the substitute to the status of a conceptual sign. Contemned though they be by some thinkers, these sensations are the mother-earth, the anchorage, the stable rock, the first and last limits, the terminus a quo and the terminus ad quem of the mind. To find such sensational termini should be our aim with all our higher thought. They end discussion; they destroy the false conceit of knowledge; and without them we are all at sea with each other's meaning. If two men act alike on a percept, they believe themselves to feel alike about it; if not, they may suspect they know it in differing ways. We can never be sure we understand each other till we are able to bring the matter to this test. [Footnote: "There is no distinction of meaning so fine as to consist in anything but a possible difference of practice.... It appears, then, that the rule for attaining the [highest] grade of clearness of apprehension is as follows: Consider what effects,

which might conceivably have practical bearings, we conceive the object of our conception to have. Then, our conception of these effects is the whole of our conception of the object.' Charles S. Peirce: 'How to make our Ideas clear,' in *Popular Science Monthly*, New York, January, 1878, p. 293.] This is why metaphysical discussions are so much like fighting with the air; they have no practical issue of a sensational kind. 'Scientific' theories, on the other hand, always terminate in definite percepts. You can deduce a possible sensation from your theory and, taking me into your laboratory, prove that your theory is true of my world by giving me the sensation then and there. Beautiful is the flight of conceptual reason through the upper air of truth. No wonder philosophers are dazzled by it still, and no wonder they look with some disdain at the low earth of feeling from which the goddess launched herself aloft. But woe to her if she return not home to its acquaintance; Nirgends haften dann die unsicheren Sohlen—every crazy wind will take her, and, like a fire-balloon at night, she will go out among the stars.

NOTE.—The reader will easily see how much of the account of the truth-function developed later in Pragmatism was already explicit in this earlier article, and how much came to be defined later. In this earlier article we find distinctly asserted:—

1. The reality, external to the true idea;
2. The critic, reader, or epistemologist, with his own belief, as warrant for this reality's existence;
3. The experienceable environment, as the vehicle or medium

connecting knower with known, and yielding the cognitive RELATION;

4. The notion of POINTING, through this medium, to the reality, as one condition of our being said to know it;

5. That of RESEMBLING it, and eventually AFFECTING it, as determining the pointing to IT and not to something else.

6. The elimination of the 'epistemological gulf,' so that the whole truth-relation falls inside of the continuities of concrete experience, and is constituted of particular processes, varying with every object and subject, and susceptible of being described in detail.

The defects in this earlier account are:—

1. The possibly undue prominence given to resembling, which altho a fundamental function in knowing truly, is so often dispensed with;

2. The undue emphasis laid upon operating on the object itself, which in many cases is indeed decisive of that being what we refer to, but which is often lacking, or replaced by operations on other things related to the object.

3. The imperfect development of the generalized notion of the WORKABILITY of the feeling or idea as equivalent to that SATISFACTORY ADAPTATION to the particular reality, which constitutes the truth of the idea. It is this more generalized notion, as covering all such specifications as pointing, fitting, operating or resembling, that distinguishes the developed view of Dewey, Schiller, and myself.

4. The treatment, [earlier], of percepts as the only realm of reality. I now treat concepts as a co-ordinate realm.

The next paper represents a somewhat broader grasp of the topic on the writer's part.

II

THE TIGERS IN INDIA [Footnote: Extracts from a presidential address before the American Psychological Association, published in the Psychological Review, vol. ii, p. 105 (1895).]

THERE are two ways of knowing things, knowing them immediately or intuitively, and knowing them conceptually or representatively. Altho such things as the white paper before our eyes can be known intuitively, most of the things we know, the tigers now in India, for example, or the scholastic system of philosophy, are known only representatively or symbolically.

Suppose, to fix our ideas, that we take first a case of conceptual knowledge; and let it be our knowledge of the tigers in India, as we sit here. Exactly what do we MEAN by saying that we here know the tigers? What is the precise fact that the cognition so confidently claimed is KNOWN-AS, to use Shadworth Hodgson's inelegant but valuable form of words?

Most men would answer that what we mean by knowing the tigers is having them, however absent in body, become in some way present to our thought; or that our knowledge of them is known as presence of our thought to them. A great mystery is usually made of this peculiar presence in absence; and the scholastic philosophy, which is only common sense grown pedantic, would explain it as a peculiar kind of existence, called

INTENTIONAL EXISTENCE of the tigers in our mind. At the very least, people would say that what we mean by knowing the tigers is mentally POINTING towards them as we sit here.

But now what do we mean by POINTING, in such a case as this? What is the pointing known-as, here?

To this question I shall have to give a very prosaic answer—one that traverses the pre-possession not only of common sense and scholasticism, but also those of nearly all the epistemological writers whom I have ever read. The answer, made brief, is this: The pointing of our thought to the tigers is known simply and solely as a procession of mental associates and motor consequences that follow on the thought, and that would lead harmoniously, if followed out, into some ideal or real context, or even into the immediate presence, of the tigers. It is known as our rejection of a jaguar, if that beast were shown us as a tiger; as our assent to a genuine tiger if so shown. It is known as our ability to utter all sorts of propositions which don't contradict other propositions that are true of the real tigers. It is even known, if we take the tigers very seriously, as actions of ours which may terminate in directly intuited tigers, as they would if we took a voyage to India for the purpose of tiger-hunting and brought back a lot of skins of the striped rascals which we had laid low. In all this there is no self-transcendancy in our mental images TAKEN BY THEMSELVES. They are one phenomenal fact; the tigers are another; and their pointing to the tigers is a perfectly commonplace intra-experiential relation, IF YOU

ONCE GRANT A CONNECTING WORLD TO BE THERE. In short, the ideas and the tigers are in themselves as loose and separate, to use Hume's language, as any two things can be; and pointing means here an operation as external and adventitious as any that nature yields.[Footnote: A stone in one field may 'fit,' we say, a hole in another field. But the relation of 'fitting,' so long as no one carries the stone to the hole and drops it in, is only one name for the fact that such an act MAY happen. Similarly with the knowing of the tigers here and now. It is only an anticipatory name for a further associative and terminative process that MAY occur.]

I hope you may agree with me now that in representative knowledge there is no special inner mystery, but only an outer chain of physical or mental intermediaries connecting thought and thing. TO KNOW AN OBJECT IS HERE TO LEAD TO IT THROUGH A CONTEXT WHICH THE WORLD SUPPLIES. All this was most instructively set forth by our colleague D. S. Miller at our meeting in New York last Christmas, and for re-confirming my sometime wavering opinion, I owe him this acknowledgment. [Footnote: See Dr. Miller's articles on Truth and Error, and on Content and Function, in the Philosophical Review, July, 1893, and Nov., 1895.]

Let us next pass on to the case of immediate or intuitive acquaintance with an object, and let the object be the white paper before our eyes. The thought-stuff and the thing-stuff are here indistinguishably the same in nature, as we saw a

moment since, and there is no context of intermediaries or associates to stand between and separate the thought and thing. There is no 'presence in absence' here, and no 'pointing,' but rather an allround embracing of the paper by the thought; and it is clear that the knowing cannot now be explained exactly as it was when the tigers were its object. Dotted all through our experience are states of immediate acquaintance just like this. Somewhere our belief always does rest on ultimate data like the whiteness, smoothness, or squareness of this paper. Whether such qualities be truly ultimate aspects of being, or only provisional suppositions of ours, held-to till we get better informed, is quite immaterial for our present inquiry. So long as it is believed in, we see our object face to face. What now do we mean by 'knowing' such a sort of object as this? For this is also the way in which we should know the tiger if our conceptual idea of him were to terminate by having led us to his lair?

This address must not become too long, so I must give my answer in the fewest words. And let me first say this: So far as the white paper or other ultimate datum of our experience is considered to enter also into some one else's experience, and we, in knowing it, are held to know it there as well as here; so far, again, as it is considered to be a mere mask for hidden molecules that other now impossible experiences of our own might some day lay bare to view; so far it is a case of tigers in India again—the things known being absent experiences, the knowing can only consist in passing smoothly towards them

through the intermediary context that the world supplies. But if our own private vision of the paper be considered in abstraction from every other event, as if it constituted by itself the universe (and it might perfectly well do so, for aught we can understand to the contrary), then the paper seen and the seeing of it are only two names for one indivisible fact which, properly named, is **THE DATUM, THE PHENOMENON, OR THE EXPERIENCE**. The paper is in the mind and the mind is around the paper, because paper and mind are only two names that are given later to the one experience, when, taken in a larger world of which it forms a part, its connections are traced in different directions. [Footnote: What is meant by this is that 'the experience' can be referred to either of two great associative systems, that of the experiencer's mental history, or that of the experienced facts of the world. Of both of these systems it forms part, and may be regarded, indeed, as one of their points of intersection. One might let a vertical line stand for the mental history; but the same object, O, appears also in the mental history of different persons, represented by the other vertical lines. It thus ceases to be the private property of one experience, and becomes, so to speak, a shared or public thing. We can track its outer history in this way, and represent it by the horizontal line. (It is also known representatively at other points of the vertical lines, or intuitively there again, so that the line of its outer history would have to be looped and wandering, but I make it straight for simplicity's sake.)] In any case, however, it is the same stuff figures in all the

sets of lines.

TO KNOW IMMEDIATELY, THEN, OR INTUITIVELY, IS FOR MENTAL CONTENT AND OBJECT TO BE IDENTICAL. This is a very different definition from that which we gave of representative knowledge; but neither definition involves those mysterious notions of self-transcendency and presence in absence which are such essential parts of the ideas of knowledge, both of philosophers and of common men. [Footnote: The reader will observe that the text is written from the point of view of NAIF realism or common sense, and avoids raising the idealistic controversy.]

III

HUMANISM AND TRUTH [Footnote: Reprinted, with slight verbal revision, from *Mind*, vol. xiii, N. S., p. 457 (October, 1904). A couple of interpolations from another article in *Mind*, 'Humanism and truth once more,' in vol. xiv, have been made.]

RECEIVING from the Editor of *Mind* an advance proof of Mr. Bradley's article on 'Truth and Practice,' I understand this as a hint to me to join in the controversy over 'Pragmatism' which seems to have seriously begun. As my name has been coupled with the movement, I deem it wise to take the hint, the more so as in some quarters greater credit has been given me than I deserve, and probably undeserved discredit in other quarters falls also to my lot.

First, as to the word 'pragmatism.' I myself have only used the term to indicate a method of carrying on abstract discussion. The serious meaning of a concept, says Mr. Peirce, lies in the concrete difference to some one which its being true will make. Strive to bring all debated conceptions to that 'pragmatic' test, and you will escape vain wrangling: if it can make no practical difference which of two statements be true, then they are really one statement in two verbal forms; if it can make no practical difference whether a given statement be true or false, then the statement has no real meaning. In neither case is there anything fit to quarrel about: we may save our breath, and pass to more

important things.

All that the pragmatic method implies, then, is that truths should HAVE practical [Footnote: 'Practical' in the sense of PARTICULAR, of course, not in the sense that the consequences may not be MENTAL as well as physical.] consequences. In England the word has been used more broadly still, to cover the notion that the truth of any statement CONSISTS in the consequences, and particularly in their being good consequences. Here we get beyond affairs of method altogether; and since my pragmatism and this wider pragmatism are so different, and both are important enough to have different names, I think that Mr. Schiller's proposal to call the wider pragmatism by the name of 'humanism' is excellent and ought to be adopted. The narrower pragmatism may still be spoken of as the 'pragmatic method.'

I have read in the past six months many hostile reviews of Schiller's and Dewey's publications; but with the exception of Mr. Bradley's elaborate indictment, they are out of reach where I write, and I have largely forgotten them. I think that a free discussion of the subject on my part would in any case be more useful than a polemic attempt at rebutting these criticisms in detail. Mr. Bradley in particular can be taken care of by Mr. Schiller. He repeatedly confesses himself unable to comprehend Schiller's views, he evidently has not sought to do so sympathetically, and I deeply regret to say that his laborious article throws, for my mind, absolutely no useful light upon

the subject. It seems to me on the whole an IGNORATIO ELENCHI, and I feel free to disregard it altogether.

The subject is unquestionably difficult. Messrs. Dewey's and Schiller's thought is eminently an induction, a generalization working itself free from all sorts of entangling particulars. If true, it involves much restatement of traditional notions. This is a kind of intellectual product that never attains a classic form of expression when first promulgated. The critic ought therefore not to be too sharp and logic-chopping in his dealings with it, but should weigh it as a whole, and especially weigh it against its possible alternatives. One should also try to apply it first to one instance, and then to another to see how it will work. It seems to me that it is emphatically not a case for instant execution, by conviction of intrinsic absurdity or of self-contradiction, or by caricature of what it would look like if reduced to skeleton shape. Humanism is in fact much more like one of those secular changes that come upon public opinion overnight, as it were, borne upon tides 'too deep for sound or foam,' that survive all the crudities and extravagances of their advocates, that you can pin to no one absolutely essential statement, nor kill by any one decisive stab.

Such have been the changes from aristocracy to democracy, from classic to romantic taste, from theistic to pantheistic feeling, from static to evolutionary ways of understanding life—changes of which we all have been spectators. Scholasticism still opposes to such changes the method of confutation by single decisive reasons, showing that the new view involves self-contradiction,

or traverses some fundamental principle. This is like stopping a river by planting a stick in the middle of its bed. Round your obstacle flows the water and 'gets there all the same.' In reading some of our opponents, I am not a little reminded of those catholic writers who refute darwinism by telling us that higher species cannot come from lower because minus nequit gignere plus, or that the notion of transformation is absurd, for it implies that species tend to their own destruction, and that would violate the principle that every reality tends to persevere in its own shape. The point of view is too myopic, too tight and close to take in the inductive argument. Wide generalizations in science always meet with these summary refutations in their early days; but they outlive them, and the refutations then sound oddly antiquated and scholastic. I cannot help suspecting that the humanistic theory is going through this kind of would-be refutation at present.

The one condition of understanding humanism is to become inductive-minded oneself, to drop rigorous definitions, and follow lines of least resistance 'on the whole.' 'In other words,' an opponent might say, 'resolve your intellect into a kind of slush.' 'Even so,' I make reply,—'if you will consent to use no politer word.' For humanism, conceiving the more 'true' as the more 'satisfactory' (Dewey's term), has sincerely to renounce rectilinear arguments and ancient ideals of rigor and finality. It is in just this temper of renunciation, so different from that of pyrrhonistic scepticism, that the spirit of humanism essentially consists. Satisfactoriness has to be measured by a multitude of

standards, of which some, for aught we know, may fail in any given case; and what is more satisfactory than any alternative in sight, may to the end be a sum of PLUSES and MINUSES, concerning which we can only trust that by ulterior corrections and improvements a maximum of the one and a minimum of the other may some day be approached. It means a real change of heart, a break with absolutistic hopes, when one takes up this inductive view of the conditions of belief.

As I understand the pragmatist way of seeing things, it owes its being to the break-down which the last fifty years have brought about in the older notions of scientific truth. 'God geometrizes,' it used to be said; and it was believed that Euclid's elements literally reproduced his geometrizing. There is an eternal and unchangeable 'reason'; and its voice was supposed to reverberate in Barbara and Celarent. So also of the 'laws of nature,' physical and chemical, so of natural history classifications—all were supposed to be exact and exclusive duplicates of pre-human archetypes buried in the structure of things, to which the spark of divinity hidden in our intellect enables us to penetrate. The anatomy of the world is logical, and its logic is that of a university professor, it was thought. Up to about 1850 almost every one believed that sciences expressed truths that were exact copies of a definite code of non-human realities. But the enormously rapid multiplication of theories in these latter days has well-nigh upset the notion of any one of them being a more literally objective kind of thing than another. There are so many geometries, so

many logics, so many physical and chemical hypotheses, so many classifications, each one of them good for so much and yet not good for everything, that the notion that even the truest formula may be a human device and not a literal transcript has dawned upon us. We hear scientific laws now treated as so much 'conceptual shorthand,' true so far as they are useful but no farther. Our mind has become tolerant of symbol instead of reproduction, of approximation instead of exactness, of plasticity instead of rigor. 'Energetics,' measuring the bare face of sensible phenomena so as to describe in a single formula all their changes of 'level,' is the last word of this scientific humanism, which indeed leaves queries enough outstanding as to the reason for so curious a congruence between the world and the mind, but which at any rate makes our whole notion of scientific truth more flexible and genial than it used to be.

It is to be doubted whether any theorizer to-day, either in mathematics, logic, physics or biology, conceives himself to be literally re-editing processes of nature or thoughts of God. The main forms of our thinking, the separation of subjects from predicates, the negative, hypothetic and disjunctive judgments, are purely human habits. The ether, as Lord Salisbury said, is only a noun for the verb to undulate; and many of our theological ideas are admitted, even by those who call them 'true,' to be humanistic in like degree.

I fancy that these changes in the current notions of truth are what originally gave the impulse to Messrs. Dewey's and

Schiller's views. The suspicion is in the air nowadays that the superiority of one of our formulas to another may not consist so much in its literal 'objectivity,' as in subjective qualities like its usefulness, its 'elegance' or its congruity with our residual beliefs. Yielding to these suspicions, and generalizing, we fall into something like the humanistic state of mind. Truth we conceive to mean everywhere, not duplication, but addition; not the constructing of inner copies of already complete realities, but rather the collaborating with realities so as to bring about a clearer result. Obviously this state of mind is at first full of vagueness and ambiguity. 'Collaborating' is a vague term; it must at any rate cover conceptions and logical arrangements. 'Clearer' is vaguer still. Truth must bring clear thoughts, as well as clear the way to action. 'Reality' is the vaguest term of all. The only way to test such a programme at all is to apply it to the various types of truth, in the hope of reaching an account that shall be more precise. Any hypothesis that forces such a review upon one has one great merit, even if in the end it prove invalid: it gets us better acquainted with the total subject. To give the theory plenty of 'rope' and see if it hangs itself eventually is better tactics than to choke it off at the outset by abstract accusations of self-contradiction. I think therefore that a decided effort at sympathetic mental play with humanism is the provisional attitude to be recommended to the reader.

When I find myself playing sympathetically with humanism, something like what follows is what I end by conceiving it to

mean.

Experience is a process that continually gives us new material to digest. We handle this intellectually by the mass of beliefs of which we find ourselves already possessed, assimilating, rejecting, or rearranging in different degrees. Some of the apperceiving ideas are recent acquisitions of our own, but most of them are common-sense traditions of the race. There is probably not a common-sense tradition, of all those which we now live by, that was not in the first instance a genuine discovery, an inductive generalization like those more recent ones of the atom, of inertia, of energy, of reflex action, or of fitness to survive. The notions of one Time and of one Space as single continuous receptacles; the distinction between thoughts and things, matter and mind between permanent subjects and changing attributes; the conception of classes with sub classes within them; the separation of fortuitous from regularly caused connections; surely all these were once definite conquests made at historic dates by our ancestors in their attempt to get the chaos of their crude individual experiences into a more shareable and manageable shape. They proved of such sovereign use as *denkmittel* that they are now a part of the very structure of our mind. We cannot play fast and loose with them. No experience can upset them. On the contrary, they apperceive every experience and assign it to its place.

To what effect? That we may the better foresee the course of our experiences, communicate with one another, and steer our

lives by rule. Also that we may have a cleaner, clearer, more inclusive mental view.

The greatest common-sense achievement, after the discovery of one Time and one Space, is probably the concept of permanently existing things. When a rattle first drops out of the hand of a baby, he does not look to see where it has gone. Non-perception he accepts as annihilation until he finds a better belief. That our perceptions mean BEINGS, rattles that are there whether we hold them in our hands or not, becomes an interpretation so luminous of what happens to us that, once employed, it never gets forgotten. It applies with equal felicity to things and persons, to the objective and to the ejective realm. However a Berkeley, a Mill, or a Cornelius may CRITICISE it, it WORKS; and in practical life we never think of 'going back' upon it, or reading our incoming experiences in any other terms. We may, indeed, speculatively imagine a state of 'pure' experience before the hypothesis of permanent objects behind its flux had been framed; and we can play with the idea that some primeval genius might have struck into a different hypothesis. But we cannot positively imagine today what the different hypothesis could have been, for the category of trans-perceptual reality is now one of the foundations of our life. Our thoughts must still employ it if they are to possess reasonableness and truth.

This notion of a FIRST in the shape of a most chaotic pure experience which sets us questions, of a SECOND in the way

of fundamental categories, long ago wrought into the structure of our consciousness and practically irreversible, which define the general frame within which answers must fall, and of a THIRD which gives the detail of the answers in the shapes most congruous with all our present needs, is, as I take it, the essence of the humanistic conception. It represents experience in its pristine purity to be now so enveloped in predicates historically worked out that we can think of it as little more than an OTHER, of a THAT, which the mind, in Mr. Bradley's phrase, 'encounters,' and to whose stimulating presence we respond by ways of thinking which we call 'true' in proportion as they facilitate our mental or physical activities and bring us outer power and inner peace. But whether the Other, the universal THAT, has itself any definite inner structure, or whether, if it have any, the structure resembles any of our predicated WHATS, this is a question which humanism leaves untouched. For us, at any rate, it insists, reality is an accumulation of our own intellectual inventions, and the struggle for 'truth' in our progressive dealings with it is always a struggle to work in new nouns and adjectives while altering as little as possible the old.

It is hard to see why either Mr. Bradley's own logic or his metaphysics should oblige him to quarrel with this conception. He might consistently adopt it verbatim et literatim, if he would, and simply throw his peculiar absolute round it, following in this the good example of Professor Royce. Bergson in France, and his disciples, Wilbois the physicist and Leroy, are thoroughgoing

humanists in the sense defined. Professor Milhaud also appears to be one; and the great Poincare misses it by only the breadth of a hair. In Germany the name of Simmel offers itself as that of a humanist of the most radical sort. Mach and his school, and Hertz and Ostwald must be classed as humanists. The view is in the atmosphere and must be patiently discussed.

The best way to discuss it would be to see what the alternative might be. What is it indeed? Its critics make no explicit statement, Professor Royce being the only one so far who has formulated anything definite. The first service of humanism to philosophy accordingly seems to be that it will probably oblige those who dislike it to search their own hearts and heads. It will force analysis to the front and make it the order of the day. At present the lazy tradition that truth is *adaequatio intellectus et rei* seems all there is to contradict it with. Mr. Bradley's only suggestion is that true thought 'must correspond to a determinate being which it cannot be said to make,' and obviously that sheds no new light. What is the meaning of the word to 'correspond'? Where is the 'being'? What sort of things are 'determinations,' and what is meant in this particular case by 'not to make'?

Humanism proceeds immediately to refine upon the looseness of these epithets. We correspond in SOME way with anything with which we enter into any relations at all. If it be a thing, we may produce an exact copy of it, or we may simply feel it as an existent in a certain place. If it be a demand, we may obey it without knowing anything more about it than its push. If it be

a proposition, we may agree by not contradicting it, by letting it pass. If it be a relation between things, we may act on the first thing so as to bring ourselves out where the second will be. If it be something inaccessible, we may substitute a hypothetical object for it, which, having the same consequences, will cipher out for us real results. In a general way we may simply ADD OUR THOUGHT TO IT; and if it SUFFERS THE ADDITION, and the whole situation harmoniously prolongs and enriches itself, the thought will pass for true.

As for the whereabouts of the beings thus corresponded to, although they may be outside of the present thought as well as in it, humanism sees no ground for saying they are outside of finite experience itself. Pragmatically, their reality means that we submit to them, take account of them, whether we like to or not, but this we must perpetually do with experiences other than our own. The whole system of what the present experience must correspond to 'adequately' may be continuous with the present experience itself. Reality, so taken as experience other than the present, might be either the legacy of past experience or the content of experience to come. Its determinations for US are in any case the adjectives which our acts of judging fit to it, and those are essentially humanistic things.

To say that our thought does not 'make' this reality means pragmatically that if our own particular thought were annihilated the reality would still be there in some shape, though possibly it might be a shape that would lack something that our thought

supplies. That reality is 'independent' means that there is something in every experience that escapes our arbitrary control. If it be a sensible experience it coerces our attention; if a sequence, we cannot invert it; if we compare two terms we can come to only one result. There is a push, an urgency, within our very experience, against which we are on the whole powerless, and which drives us in a direction that is the destiny of our belief. That this drift of experience itself is in the last resort due to something independent of all possible experience may or may not be true. There may or may not be an extra-experiential 'ding an sich' that keeps the ball rolling, or an 'absolute' that lies eternally behind all the successive determinations which human thought has made. But within our experience ITSELF, at any rate, humanism says, some determinations show themselves as being independent of others; some questions, if we ever ask them, can only be answered in one way; some beings, if we ever suppose them, must be supposed to have existed previously to the supposing; some relations, if they exist ever, must exist as long as their terms exist.
