A Strange Story — Volume 08

CHAPTER LXXIV

My Work, my Philosophical Work—the ambitious hope of my intellectual life—how eagerly I returned to it again! Far away from my household grief, far away from my haggard perplexities—neither a Lilian nor a Margrave there!

As I went over what I had before written, each link in its chain of reasoning seemed so serried, that to alter one were to derange all; and the whole reasoning was so opposed to the possibility of the wonders I myself had experienced, so hostile to the subtle hypotheses of a Faber, or the childlike belief of an Amy, that I must have destroyed the entire work if I had admitted such contradictions to its design!

But the work was I myself!—I, in my solid, sober, healthful mind, before the brain had been perplexed by a phantom. Were phantoms to be allowed as testimonies against science? No; in returning to my Book, I returned to my former Me!

How strange is that contradiction between our being as man and our being as Author! Take any writer enamoured of a system: a thousand things may happen to him every day which might shake his faith in that system; and while he moves about as mere

man, his faith is shaken. But when he settles himself back into the phase of his being as author, the mere act of taking pen in hand and smoothing the paper before him restores his speculations to their ancient mechanical train. The system, the beloved system, reasserts its tyrannic sway, and he either ignores, or moulds into fresh proofs of his theory as author, all which, an hour before, had given his theory the lie in his living perceptions as man.

I adhered to my system,—I continued my work. Here, in the barbarous desert, was a link between me and the Cities of Europe. All else might break down under me. The love I had dreamed of was blotted out from the world, and might never be restored; my heart might be lonely, my life be an exile's. My reason might, at last, give way before the spectres which awed my senses, or the sorrow which stormed my heart. But here at least was a monument of my rational thoughtful Me,—of my individualized identity in multiform creation. And my mind, in the noon of its force, would shed its light on the earth when my form was resolved to its elements. Alas! in this very yearning for the Hereafter, though but the Hereafter of a Name, could I see only the craving of Mind, and hear not the whisper of Soul!

The avocation of a colonist, usually so active, had little interest for me. This vast territorial lordship, in which, could I have endeared its possession by the hopes that animate a Founder, I should have felt all the zest and the pride of ownership, was but the run of a common to the passing emigrant, who would leave no son to inherit the tardy products of his labour. I was not goaded

to industry by the stimulus of need. I could only be ruined if I risked all my capital in the attempt to improve. I lived, therefore, amongst my fertile pastures, as careless of culture as the English occupant of the Highland moor, which he rents for the range of its solitudes.

I knew, indeed, that if ever I became avaricious, I might swell my modest affluence into absolute wealth. I had revisited the spot in which I had discovered the nugget of gold, and had found the precious metal in rich abundance just under the first coverings of the alluvial soil. I concealed my discovery from all. I knew that, did I proclaim it, the charm of my bush-life would be gone. My fields would be infested by all the wild adventurers who gather to gold as the vultures of prey round a carcass; my servants would desert me, my very flocks would be shepherdless!

Months again rolled on months. I had just approached the close of my beloved Work, when it was again suspended, and by an anguish keener than all which I had previously known.

Lilian became alarmingly ill. Her state of health, long gradually declining, had hitherto admitted checkered intervals of improvement, and exhibited no symptoms of actual danger. But now she was seized with a kind of chronic fever, attended with absolute privation of sleep, an aversion to even the lightest nourishment, and an acute nervous susceptibility to all the outward impressions of which she had long seemed so unconscious; morbidly alive to the faintest sound, shrinking from the light as from a torture. Her previous impatience at

my entrance into her room became aggravated into vehement emotions, convulsive paroxysms of distress; so that Faber banished me from her chamber, and, with a heart bleeding at every fibre, I submitted to the cruel sentence.

Faber had taken up his abode in my house and brought Amy with him; one or the other never left Lilian, night or day. The great physician spoke doubtfully of the case, but not despairingly.

"Remember," he said, "that in spite of the want of sleep, the abstinence from food, the form has not wasted as it would do were this fever inevitably mortal. It is upon that phenomenon I build a hope that I have not been mistaken in the opinion I hazarded from the first. We are now in the midst of the critical struggle between life and reason; if she preserve the one, my conviction is that she will regain the other. That seeming antipathy to yourself is a good omen. You are inseparably associated with her intellectual world; in proportion as she revives to it, must become vivid and powerful the reminiscences of the shock that annulled, for a time, that world to her. So I welcome, rather than fear, the over-susceptibility of the awakening senses to external sights and sounds. A few days will decide if I am right. In this climate the progress of acute maladies is swift, but the recovery from them is yet more startlingly rapid. Wait, endure, be prepared to submit to the will of Heaven; but do not despond of its mercy."

I rushed away from the consoler,—away into the thick of the forests, the heart of the solitude. All around me, there, was

joyous with life; the locust sang amidst the herbage; the cranes gambolled on the banks of the creek; the squirrel-like opossums frolicked on the feathery boughs. "And what," said I to myself,—"what if that which seems so fabulous in the distant being whose existence has bewitched my own, be substantially true? What if to some potent medicament Margrave owes his glorious vitality, his radiant youth? Oh, that I had not so disdainfully turned away from his hinted solicitations—to what?—to nothing guiltier than lawful experiment. Had I been less devoted a bigot to this vain schoolcraft, which we call the Medical Art, and which, alone in this age of science, has made no perceptible progress since the days of its earliest teachers—had I said, in the true humility of genuine knowledge, 'these alchemists were men of genius and thought; we owe to them nearly all the grand hints of our chemical science,—is it likely that they would have been wholly drivellers and idiots in the one faith they clung to the most?'—had I said that, I might now have no fear of losing my Lilian. Why, after all, should there not be in Nature one primary essence, one master substance; in which is stored the specific nutriment of life?"

Thus incoherently muttering to the woods what my pride of reason would not have suffered me gravely to say to my fellow-men, I fatigued my tormented spirits into a gloomy calm, and mechanically retraced my steps at the decline of day. I seated myself at the door of my solitary log-hut, leaning my cheek upon my hand, and musing. Wearily I looked up, roused by a

discord of clattering hoofs and lumbering wheels on the hollow-sounding grass-track. A crazy groaning vehicle, drawn by four horses, emerged from the copse of gum-trees,—fast, fast along the road, which no such pompous vehicle had traversed since that which had borne me—luxurious satrap for an early colonist—to my lodge in the wilderness. What emigrant rich enough to squander in the hire of such an equipage more than its cost in England, could thus be entering on my waste domain? An ominous thrill shot through me.

The driver—perhaps some broken-down son of luxury in the Old World, fit for nothing in the New World but to ply, for hire, the task that might have led to his ruin when plied in sport—stopped at the door of my hut, and called out, "Friend, is not this the great Fenwick Section, and is not yonder long pile of building the Master's house?"

Before I could answer I heard a faint voice, within the vehicle, speaking to the driver; the last nodded, descended from his seat, opened the carriage-door, and offered his arm to a man, who, waving aside the proffered aid, descended slowly and feebly; paused a moment as if for breath, and then, leaning on his staff, walked from the road, across the sward rank with luxuriant herbage, through the little gate in the new-set fragrant wattle-fence, wearily, languidly, halting often, till he stood facing me, leaning both wan and emaciated hands upon his staff, and his meagre form shrinking deep within the folds of a cloak lined thick with costly sables. His face was sharp, his complexion

of a livid yellow, his eyes shone out from their hollow orbits, unnaturally enlarged and fatally bright. Thus, in ghastly contrast to his former splendour of youth and opulence of life, Margrave stood before me.

"I come to you," said Margrave, in accents hoarse and broken, "from the shores of the East. Give me shelter and rest. I have that to say which will more than repay you."

Whatever, till that moment, my hate and my fear of this unexpected visitant, hate would have been inhumanity, fear a meanness, conceived for a creature so awfully stricken down.

Silently, involuntarily, I led him into the house. There he rested a few minutes, with closed eyes and painful gasps for breath. Meanwhile, the driver brought from the carriage a travelling-bag and a small wooden chest or coffer, strongly banded with iron clamps. Margrave, looking up as the man drew near, exclaimed fiercely, "Who told you to touch that chest? How dare you? Take it from that man, Fenwick! Place it here,—here by my side!"

I took the chest from the driver, whose rising anger at being so imperiously rated in the land of democratic equality was appeased by the gold which Margrave lavishly flung to him.

"Take care of the poor gentleman, squire," he whispered to me, in the spontaneous impulse of gratitude, "I fear he will not trouble you long. He must be monstrous rich. Arrived in a vessel hired all to himself, and a train of outlandish attendants, whom he has left behind in the town yonder. May I bait my horses in

your stables? They have come a long way."

I pointed to the neighbouring stables, and the man nodded his thanks, remounted his box, and drove off.

I returned to Margrave. A faint smile came to his lips as I placed the chest beside him.

"Ay, ay," he muttered. "Safe! safe! I shall soon be well again,—very soon! And now I can sleep in peace!"

I led him into an inner room, in which there was a bed. He threw himself on it with a loud sigh of relief. Soon, half raising himself on his elbow, he exclaimed, "The chest—bring it hither! I need it always beside me! There, there! Now for a few hours of sleep; and then, if I can take food, or some such restoring cordial as your skill may suggest, I shall be strong enough to talk. We will talk! we will talk!"

His eyes closed heavily as his voice fell into a drowsy mutter: a moment more and he was asleep.

I watched beside him, in mingled wonder and compassion. Looking into that face, so altered yet still so young, I could not sternly question what had been the evil of that mystic life, which seemed now oozing away through the last sands in the hour-glass. I placed my hand softly on his pulse: it scarcely beat. I put my ear to his breast, and involuntarily sighed, as I distinguished in its fluttering heave that dull, dumb sound, in which the heart seems knelling itself to the greedy grave!

Was this, indeed, the potent magician whom I had so feared!—this the guide to the Rosicrucian's secret of life's renewal, in

whom, but an hour or two ago, my fancies gulled my credulous trust!

But suddenly, even while thus chiding my wild superstitions, a fear, that to most would seem scarcely less superstitious, shot across me. Could Lilian be affected by the near neighbourhood of one to whose magnetic influence she had once been so strangely subjected? I left Margrave still sleeping, closed and locked the door of the hut, went back to my dwelling, and met Amy at the threshold. Her smile was so cheering that I felt at once relieved.

"Hush!" said the child, putting her finger to her lips, "she is so quiet!

I was coming in search of you, with a message from her."

"From Lilian to me—what! to me!"

"Hush! About an hour ago, she beckoned me to draw near to her, and then said, very softly: 'Tell Allen that light is coming back to me, and it all settles on him—on him. Tell him that I pray to be spared to walk by his side on earth, hand-in-hand to that heaven which is no dream, Amy. Tell him that,—no dream!'"

While the child spoke my tears gushed, and the strong hands in which I veiled my face quivered like the leaf of the aspen. And when I could command my voice, I said plaintively,—

"May I not, then, see her?—only for a moment, and answer her message though but by a look?"

"No, no!"

"No! Where is Faber?"

"Gone into the forest, in search of some herbs, but he gave

me this note for you."

I wiped the blinding tears from my eyes, and read these lines:

"I have, though with hesitation, permitted Amy to tell you the cheering words, by which our beloved patient confirms my belief that reason is coming back to her,—slowly, labouringly, but if she survive, for permanent restoration. On no account attempt to precipitate or disturb the work of nature. As dangerous as a sudden glare of light to eyes long blind and newly regaining vision in the friendly and soothing dark would be the agitation that your presence at this crisis would cause. Confide in me."

I remained brooding over these lines and over Lilian's message long and silently, while Amy's soothing whispers stole into my ear, soft as the murmurs of a rill heard in the gloom of forests. Rousing myself at length, my thoughts returned to Margrave. Doubtless he would soon awake. I bade Amy bring me such slight nutriment as I thought best suited to his enfeebled state, telling her it was for a sick traveller, resting himself in my hut. When Amy returned, I took from her the little basket with which she was charged, and having, meanwhile, made a careful selection from the contents of my medicine-chest, went back to the hut. I had not long resumed my place beside Margrave's pillow before he awoke.

"What o'clock is it?" he asked, with an anxious voice.

"About seven."

"Not later? That is well; my time is precious."

"Compose yourself, and eat."

I placed the food before him, and he partook of it, though sparingly, and as if with effort. He then dozed for a short time, again woke up, and impatiently demanded the cordial, which I had prepared in the mean while. Its effect was greater and more immediate than I could have anticipated, proving, perhaps, how much of youth there was still left in his system, however undermined and ravaged by disease. Colour came back to his cheek, his voice grew perceptibly stronger. And as I lighted the lamp on the table near us—for it was growing dark—he gathered himself up, and spoke thus,—

"You remember that I once pressed on you certain experiments. My object then was to discover the materials from which is extracted the specific that enables the organs of life to expel disease and regain vigour. In that hope I sought your intimacy,—an intimacy you gave, but withdrew."

"Dare you complain? Who and what was the being from whose intimacy I shrank appalled?"

"Ask what questions you please," cried Margrave, impatiently, "later—if I have strength left to answer them; but do not interrupt me, while I husband my force to say what alone is important to me and to you. Disappointed in the hopes I had placed in you, I resolved to repair to Paris,—that great furnace of all bold ideas. I questioned learned formalists; I listened to audacious empirics. The first, with all their boasted knowledge, were too timid to concede my premises; the second, with all their speculative

daring, too knavish to let me trust to their conclusions. I found but one man, a Sicilian, who comprehended the secrets that are called occult, and had the courage to meet Nature and all her agencies face to face. He believed, and sincerely, that he was approaching the grand result, at the very moment when he perished from want of the common precautions which a tyro in chemistry would have taken. At his death the gaudy city became hateful; all its pretended pleasures only served to exhaust life the faster. The true joys of youth are those of the wild bird and wild brute, in the healthful enjoyment of Nature. In cities, youth is but old age with a varnish. I fled to the East; I passed through the tents of the Arabs; I was guided—no matter by whom or by what—to the house of a Dervish, who had had for his teacher the most erudite master of secrets occult, whom I knew years ago at Aleppo—Why that exclamation?"

"Proceed. What I have to say will come—later."

"From this Dervish I half forced and half purchased the secret I sought to obtain. I now know from what peculiar substance the so-called elixir of life is extracted; I know also the steps of the process through which that task is accomplished. You smile incredulously. What is your doubt? State it while I rest for a moment. My breath labours; give me more of the cordial."

"Need I tell you my doubt? You have, you say, at your command the elixir of life of which Cagliostro did not leave his disciples the recipe; and you stretch out your hand for a vulgar cordial which any village chemist could give you!"

"I can explain this apparent contradiction. The process by which the elixir is extracted from the material which hoards its essence is one that requires a hardihood of courage which few possess. This Dervish, who had passed through that process once, was deaf to all prayer, and unmoved by all bribes, to attempt it again. He was poor; for the secret by which metals may be transmuted is not, as the old alchemists seem to imply, identical with that by which the elixir of life is extracted. He had only been enabled to discover, in the niggard strata of the lands within range of his travel, a few scanty morsels of the glorious substance. From these he had extracted scarcely enough of the elixir to fill a third of that little glass which I have just drained. He guarded every drop for himself. Who that holds healthful life as the one boon above all price to the living, would waste upon others what prolongs and recruits his own being? Therefore, though he sold me his secret, he would not sell me his treasure."

"Any quack may sell you the information how to make not only an elixir, but a sun and a moon, and then scare you from the experiment by tales of the danger of trying it! How do you know that this essence which the Dervish possessed was the elixir of life, since, it seems, you have not tried on yourself what effect its precious drops could produce? Poor wretch, who once seemed to me so awfully potent! do you come to the Antipodes in search of a drug that only exists in the fables by which a child is amused?"

"The elixir of life is no fable," cried Margrave, with a kindling of eye, a power of voice, a dilatation of form, that startled me

in one just before so feeble. "That elixir was bright in my veins when we last met. From that golden draught of the life-spring of joy I took all that can gladden creation. What sage would not have exchanged his wearisome knowledge for my lusty revels with Nature? What monarch would not have bartered his crown, with its brain-ache of care, for the radiance that circled my brows, flashing out from the light that was in me? Oh again, oh again! to enjoy the freedom of air with the bird, and the glow of the sun with the lizard; to sport through the blooms of the earth, Nature's playmate and darling; to face, in the forest and desert, the pard and the lion,—Nature's bravest and fiercest,—her firstborn, the heir of her realm, with the rest of her children for slaves!"

As these words burst from his lips, there was a wild grandeur in the aspect of this enigmatical being which I had never beheld in the former time of his affluent, dazzling youth. And, indeed, in his language, and in the thoughts it clothed, there was an earnestness, a concentration, a directness, a purpose, which had seemed wanting to his desultory talk in the earlier days I expected that reaction of languor and exhaustion would follow his vehement outbreak of passion, but, after a short pause, he went on with steady accents. His will was sustaining his strength. He was determined to force his convictions on me, and the vitality, once so rich, rallied all its lingering forces to the aid of its intense desire.

"I tell you, then," he resumed, with deliberate calmness, "that, years ago, I tested in my own person that essence which is the

sovereign medicament. In me, as you saw me at L——, you beheld the proof of its virtues. Feeble and ill as I am now, my state was incalculably more hopeless when formerly restored by the elixir. He from whom I then took the sublime restorative died without revealing the secret of its composition. What I obtained was only just sufficient to recruit the lamp of my life, then dying down—and no drop was left for renewing the light which wastes its own rays in the air that it gilds. Though the Dervish would not sell me his treasure, he permitted me to see it. The appearance and odour of this essence are strangely peculiar,—unmistakable by one who has once beheld and partaken of it. In short, I recognized in the hands of the Dervish the bright life-renewer, as I had borne it away from the corpse of the Sage of Aleppo."

"Hold! Are you then, in truth, the murderer of Haroun, and is your true name Louis Grayle?"

"I am no murderer, and Louis Grayle did not leave me his name. I again adjure you to postpone, for this night at least, the questions you wish to address to me.

"Seeing that this obstinate pauper possessed that for which the pale owners of millions, at the first touch of palsy or gout, would consent to be paupers, of course I coveted the possession of the essence even more than the knowledge of the substance from which it is extracted. I had no coward fear of the experiment, which this timid driveller had not the nerve to renew. But still the experiment might fail. I must traverse land and sea to find

the fit place for it, while, in the rags of the Dervish, the unfailing result of the experiment was at hand. The Dervish suspected my design, he dreaded my power. He fled on the very night in which I had meant to seize what he refused to sell me. After all, I should have done him no great wrong; for I should have left him wealth enough to transport himself to any soil in which the material for the elixir may be most abundant; and the desire of life would have given his shrinking nerves the courage to replenish its ravished store. I had Arabs in my pay, who obeyed me as hounds their master. I chased the fugitive. I came on his track, reached a house in a miserable village, in which, I was told, he had entered but an hour before. The day was declining, the light in the room imperfect. I saw in a corner what seemed to me the form of the Dervish,—stooped to seize it, and my hand closed on an asp. The artful Dervish had so piled his rags that they took the shape of the form they had clothed, and he had left, as a substitute for the giver of life, the venomous reptile of death.

"The strength of my system enabled me to survive the effect of the poison; but during the torpor that numbed me, my Arabs, alarmed, gave no chase to my quarry. At last, though enfeebled and languid, I was again on my horse. Again the pursuit, again the track! I learned—but this time by a knowledge surer than man's—that the Dervish had taken his refuge in a hamlet that had sprung up over the site of a city once famed through Assyria. The same voice that informed me of his whereabouts warned me not to pursue. I rejected the warning. In my eager impatience

I sprang on to the chase; in my fearless resolve I felt sure of the prey. I arrived at the hamlet wearied out, for my forces were no longer the same since the bite of the asp. The Dervish eluded me still; he had left the floor, on which I sank exhausted, but a few minutes before my horse stopped at the door. The carpet, on which he had rested, still lay on the ground. I dismissed the youngest and keenest of my troop in search of the fugitive. Sure that this time he would not escape, my eyes closed in sleep.

"How long I slept I know not,—a long dream of solitude, fever, and anguish. Was it the curse of the Dervish's car pet? Was it a taint in the walls of the house, or of the air, which broods sickly and rank over places where cities lie buried? I know not; but the Pest of the East had seized me in slumber. When my senses recovered I found myself alone, plundered of my arms, despoiled of such gold as I had carried about me. All had deserted and left me, as the living leave the dead whom the Plague has claimed for its own. As soon as I could stand I crawled from the threshold. The moment my voice was heard, my face seen, the whole squalid populace rose as on a wild beast,—a mad dog. I was driven from the place with imprecations and stones, as a miscreant whom the Plague had overtaken while plotting the death of a holy man. Bruised and bleeding, but still defying, I turned in wrath on that dastardly rabble; they slunk away from my path. I knew the land for miles around. I had been in that land years, long years ago. I came at last to the road which the caravans take on their way to Damascus. There I was found,

speechless and seemingly lifeless, by some European travellers. Conveyed to Damascus, I languished for weeks between life and death. But for the virtue of that essence, which lingered yet in my veins, I could not have survived—even thus feeble and shattered. I need not say that I now abandoned all thought of discovering the Dervish. I had at least his secret, if I had failed of the paltry supply he had drawn from its uses. Such appliances as he had told me were needful are procured in the East with more ease than in Europe. To sum up, I am here, instructed in all the knowledge, and supplied with all the aids, which warrant me in saying, 'Do you care for new life in its richest enjoyments, if not for yourself, for one whom you love and would relieve from the grave? Then, share with me in a task that a single night will accomplish, and ravish a prize by which the life that you value the most will be saved from the dust and the worm, to live on, ever young, ever blooming, when each infant, new-born while I speak, shall have passed to the grave. Nay, where is the limit to life, while the earth hides the substance by which life is renewed?'

I give as faithfully as I can recall them the words in which Margrave addressed me. But who can guess by cold words transcribed, even were they artfully ranged by a master of language, the effect words produce when warm from the breath of the speaker? Ask one of an audience which some orator held enthralled, why his words do not quicken a beat in the reader's pulse, and the answer of one who had listened will be, "The words took their charm from the voice and the eye, the aspect,

the manner, the man!" So it was with the incomprehensible being before me. Though his youth was faded, though his beauty was dimmed, though my fancies clothed him with memories of abhorrent dread, though my reason opposed his audacious beliefs and assumptions, still he charmed and spell-bound me; still he was the mystical fascinator; still, if the legends of magic had truth for their basis, he was the born magician,—as genius, in what calling soever, is born with the gift to enchant and subdue us.

Constraining myself to answer calmly, I said, "You have told me your story; you have defined the object of the experiment in which you ask me to aid. You do right to bid me postpone my replies or my questions. Seek to recruit by sleep the strength you have so sorely tasked. To-morrow—"

"To-morrow, ere night, you will decide whether the man whom out of all earth I have selected to aid me shall be the foe to condemn me to perish! I tell you plainly I need your aid, and your prompt aid. Three days from this, and all aid will be too late!"

I had already gained the door of the room, when he called to me to come back.

"You do not live in this but, but with your family yonder. Do not tell them that I am here; let no one but yourself see me as I now am. Lock the door of the but when you quit it. I should not close my eyes if I were not secure from intruders."

"There is but one in my house, or in these parts, whom I would except from the interdict you impose. You are aware of your own imminent danger; the life, which you believe the discovery of a

Dervish will indefinitely prolong, seems to my eye of physician to hang on a thread. I have already formed my own conjecture as to the nature of the disease that enfeebles you. But I would fain compare that conjecture with the weightier opinion of one whose experience and skill are superior to mine. Permit me, then, when I return to you to-morrow, to bring with me the great physician to whom I refer. His name will not, perhaps, be unknown to you: I speak of Julius Faber."

"A physician of the schools! I can guess well enough how learnedly he would prate, and how little he could do. But I will not object to his visit, if it satisfies you that, since I should die under the hands of the doctors, I may be permitted to indulge my own whim in placing my hopes in a Dervish. Yet stay. You have, doubtless, spoken of me to this Julius Faber, your fellow-physician and friend? Promise me, if you bring him here, that you will not name me,—that you will not repeat to him the tale I have told you, or the hope which has led me to these shores. What I have told you, no matter whether, at this moment, you consider me the dupe of a chimera, is still under the seal of the confidence which a patient reposes in the physician he himself selects for his confidant. I select you, and not Julius Faber!"

"Be it as you will," said I, after a moment's reflection. "The moment you make yourself my patient, I am bound to consider what is best for you. And you may more respect, and profit by, an opinion based upon your purely physical condition than by one in which you might suppose the advice was directed rather to the

disease of the mind than to that of the body."

"How amazed and indignant your brother-physician will be if he ever see me a second time! How learnedly he will prove that, according to all correct principles of science and nature, I ought to be dead!"

He uttered this jest with a faint weary echo of his old merry, melodious laugh, then turned his face to the wall; and so I left him to repose.

CHAPTER LXXV

I found Mrs. Ashleigh waiting for me in our usual sitting-room. She was in tears. She had begun to despond of Lilian's recovery, and she infected me with her own alarm. However, I disguised my participation in her fears, soothed and sustained her as I best could, and persuaded her to retire to rest. I saw Faber for a few minutes before I sought my own chamber. He assured me that there was no perceptible change for the worse in Lilian's physical state since he had last seen me, and that her mind, even within the last few hours, had become decidedly more clear. He thought that, within the next twenty-four hours, the reason would make a strong and successful effort for complete recovery; but he declined to hazard more than a hope that the effort would not exhaust the enfeebled powers of the frame. He himself was so in need of a few hours of rest that I ceased to harass him with questions which he could not answer, and fears which he could not appease. Before leaving him for the night, I told him briefly that there was a traveller in my but smitten by a disease which seemed to me so grave that I would ask his opinion of the case, if he could accompany me to the but the next morning.

My own thoughts that night were not such as would suffer me to sleep.

Before Margrave's melancholy state much of my former fear and abhorrence faded away. This being, so exceptional

that fancy might well invest him with preternatural attributes, was now reduced by human suffering to human sympathy and comprehension; yet his utter want of conscience was still as apparent as in his day of joyous animal spirits. With what hideous candour he had related his perfidy and ingratitude to the man to whom, in his belief, he owed an inestimable obligation, and with what insensibility to the signal retribution which in most natures would have awakened remorse!

And by what dark hints and confessions did he seem to confirm the incredible memoir of Sir Philip Derval! He owned that he had borne from the corpse of Haroun the medicament to which he ascribed his recovery from a state yet more hopeless than that under which he now laboured! He had alluded, rapidly, obscurely, to some knowledge at his command "surer than man's." And now, even now the mere wreck of his former existence—by what strange charm did he still control and confuse my reason? And how was it that I felt myself murmuring, again and again, "But what, after all, if his hope be no chimera, and if Nature do hide a secret by which I could save the life of my beloved Lilian?"

And again and again, as that thought would force itself on me, I rose and crept to Lilian's threshold, listening to catch the faintest sound of her breathing. All still, all dark! In that sufferer recognized science detects no mortal disease, yet dares not bid me rely on its amplest resources of skill to turn aside from her slumber the stealthy advance of death; while in yon log-hut one

whose malady recognized science could not doubt to be mortal has composed himself to sleep, confident of life! Recognized science?—recognized ignorance! The science of to-day is the ignorance of to-morrow! Every year some bold guess lights up a truth to which, but the year before, the schoolmen of science were as blinded as moles.

"What, then," my lips kept repeating,— "what if Nature do hide a secret by which the life of my life can be saved? What do we know of the secrets of Nature? What said Newton himself of his knowledge? 'I am like a child picking up pebbles and shells on the sand, while the great ocean of Truth lies all undiscovered around me!' And did Newton himself, in the ripest growth of his matchless intellect, hold the creed of the alchemists in scorn? Had he not given to one object of their research, in the transmutation of metals, his days and his nights? Is there proof that he ever convinced himself that the research was the dream, which we, who are not Newtons, call it?¹ And that other great

¹ "Besides the three great subjects of Newton's labours—the fluxional calculus, physical astronomy, and optics—a very large portion of his time, while resident in his college, was devoted to researches of which scarcely a trace remains. Alchemy, which had fascinated so many eager and ambitious minds, seems to have tempted Newton with an overwhelming force. What theories he formed, what experiments he tried, in that laboratory where, it is said, the fire was scarcely extinguished for weeks together, will never be known. It is certain that no success attended his labours; and Newton was not a man—like Kepler—to detail to the world all the hopes and disappointments, all the crude and mystical fancies, which mixed themselves up with his career of philosophy... Many years later we find Newton in correspondence with Locke, with reference to a mysterious red earth by which Boyle, who was then recently dead, had asserted that he could effect the grand desideratum of multiplying gold. By

sage, inferior only to Newton—the calculating doubt-weighter, Descartes—had he not believed in the yet nobler hope of the alchemists,—believed in some occult nostrum or process by which human life could attain to the age of the Patriarchs?"²

this time, however, Newton's faith had become somewhat shaken by the unsatisfactory communications which he had himself received from Boyle on the subject of the golden recipe, though he did not abandon the idea of giving the experiment a further trial as soon as the weather should become suitable for furnace experiments."—Quarterly Review, No. 220, pp. 125, 126.

² Southey, in his "Doctor," vol. vi. p. 2, reports the conversation of Sir Kenelm Digby with Descartes, in which the great geometrician said, "That as for rendering man immortal, it was what he could not venture to promise, but that he was very sure he could prolong his life to the standard of the patriarchs." And Southey adds, "that St. Evremond, to whom Digby repeated this, says that this opinion of Descartes was well known both to his friends in Holland and in France." By the stress Southey lays on this hearsay evidence, it is clear that he was not acquainted with the works and biography of Descartes, or he would have gone to the fountain-head for authority on Descartes's opinions, namely, Descartes himself. It is to be wished that Southey had done so, for no one more than he would have appreciated the exquisitely candid and lovable nature of the illustrious Frenchman, and the sincerity with which he cherished in his heart whatever doctrine he conceived in his understanding. Descartes, whose knowledge of anatomy was considerable, had that passion for the art of medicine which is almost inseparable from the pursuit of natural philosophy. At the age of twenty-four he had sought (in Germany) to obtain initiation into the brotherhood of the Rosicrucians, but unluckily could not discover any member of the society to introduce him. "He desired," says Cousin, "to assure the health of man, diminish his ills, extend his existence. He was terrified by the rapid and almost momentary passage of man upon earth. He believed it was not, perhaps, impossible to prolong its duration." There is a hidden recess of grandeur in this idea, and the means proposed by Descartes for the execution of his project were not less grand. In his "Discourse on Method," Descartes says, "If it is possible to find some means to render generally men more wise and more able than they have been till now, it is, I believe, in medicine that those means must be sought... I am sure that there is no one, even in the medical profession, who will not avow that

In thoughts like these the night wore away, the moonbeams that streamed through my window lighting up the spacious solitudes beyond,—mead and creek, forest-land, mountaintop,—and the silence without broken by the wild cry of the night hawk and the sibilant melancholy dirge of the shining chrysococyx,³—bird that never sings but at night, and obstinately

all which one knows of the medical art is almost nothing in comparison to that which remains to learn, and that one could be exempted from an infinity of maladies, both of body and mind, and even, perhaps, from the decrepitude of old age, if one had sufficient lore of their causes and of all the remedies which nature provides for them. Therefore, having design to employ all my life in the research of a science so necessary, and having discovered a path which appears to me such that one ought infallibly, in following, to find it, if one is not hindered prematurely by the brevity of life or by the defects of experience, I consider that there is no better remedy against those two hindrances than to communicate faithfully to the public the little I have found," etc. ("Discours de la Methode," vol. i. OEuvres de Descartes, Cousin's Edition.) And again, in his "Correspondence" (vol. ix. p. 341), he says: "The conservation of health has been always the principal object of my studies, and I have no doubt that there is a means of acquiring much knowledge touching medicine which, up to this time, is ignored." He then refers to his meditated Treatise on Animals as only an entrance upon that knowledge. But whatever secrets Descartes may have thought to discover they are not made known to the public according to his promise. And in a letter to M. Chanut, written in 1646 (four years before he died), he says ingenuously: "I will tell you in confidence that the notion, such as it is, which I have endeavoured to acquire in physical philosophy, had greatly assisted me to establish certain foundations for moral philosophy; and that I am more easily satisfied upon this point than I am on many others touching medicine, to which I have, nevertheless, devoted much more time. So that"—(adds the grand thinker, with a pathetic nobleness)—"so that, instead of finding the means to preserve life, I have found another good, more easy and more sure, which is—not to fear death."

³ Chrysococyx lucidus,—namely, the bird popularly called the shining or bronzed cuckoo. "Its note is an exceedingly melancholy whistle, heard at night, when it is very

haunts the roofs of the sick and dying, ominous of woe and death.

But up sprang the sun, and, chasing these gloomy sounds, out burst the wonderful chorus of Australian groves, the great kingfisher opening the jocund melodious babble with the glee of his social laugh.

And now I heard Faber's step in Lilian's room,—heard through the door her soft voice, though I could not distinguish the words. It was not long before I saw the kind physician standing at the threshold of my chamber. He pressed his finger to his lip, and made me a sign to follow him. I obeyed, with noiseless tread and stifled breathing. He awaited me in the garden under the flowering acacias, passed his arm in mine, and drew me into the open pasture-land.

"Compose yourself," he then said; "I bring you tidings both of gladness and of fear. Your Lilian's mind is restored: even the memories which had been swept away by the fever that followed her return to her home in L—— are returning, though as yet indistinct. She yearns to see you, to bless you for all your noble devotion, your generous, greathearted love; but I forbid such interview now. If, in a few hours, she become either decidedly stronger or decidedly more enfeebled, you shall be summoned to her side. Even if you are condemned to a loss for which the sole

annoying to any sick or nervous person who may be inclined to sleep. I have known many instances where the bird has been perched on a tree in the vicinity of the room of an invalid, uttering its mournful notes, and it was only with the greatest difficulty that it could be dislodged from its position."—Dr. Bennett: *Gatherings of a Naturalist in Australasia*.

consolation must be placed in the life hereafter, you shall have, at least, the last mortal commune of soul with soul. Courage! courage! You are man! Bear as man what you have so often bid other men submit to endure."

I had flung myself on the ground,—writhing worm that had no home but on earth! Man, indeed! Man! All, at that moment, I took from manhood was its acute sensibility to love and to anguish!

But after all such paroxysms of mortal pain, there comes a strange lull. Thought itself halts, like the still hush of water between two descending torrents. I rose in a calm, which Faber might well mistake for fortitude.

"Well," I said quietly, "fulfil your promise. If Lilian is to pass away from me, I shall see her, at least, again; no wall, you tell me, between our minds; mind to mind once more,—once more!"

"Allen," said Faber, mournfully and softly, "why do you shun to repeat my words—soul to soul?"

"Ay, ay,—I understand. Those words mean that you have resigned all hope that Lilian's life will linger here, when her mind comes back in full consciousness; I know well that last lightning flash and the darkness which swallows it up!"

"You exaggerate my fears. I have not resigned the hope that Lilian will survive the struggle through which she is passing, but it will be cruel to deceive you—my hope is weaker than it was."

"Ay, ay. Again, I understand! Your science is in fault,—it desponds. Its last trust is in the wonderful resources of Nature,

the vitality stored in the young!"

"You have said,—those resources of Nature are wondrous. The vitality of youth is a fountain springing up from the deeps out of sight, when, a moment before, we had measured the drops oozing out from the sands, and thought that the well was exhausted."

"Come with me,—come. I told you of another sufferer yonder. I want your opinion of his case. But can you be spared a few minutes from Lilian's side?"
