Редакционная статья

Настоящим номером редакционная коллегия начинает выпуск теоретического альманаха «*Aesthetica Universalis* (Всеобщая эстетика)», который будет издаваться ежеквартально в печатном и в электронном вариантах с последующим выходом издания в крупнейшие системы индексирования.

Теоретический альманах «*Aesthetica Universalis*», который начинает издавать кафедра эстетики философского факультета МГУ имени М.В.Ломоносова, старейшая профильная институция в нашей стране, планируется как уникальное специализированное издание по эстетической проблематике, предназначенное для исследователей, преподавателей и одновременно для широкой аудитории. В число членов редакционного совета, редакционной коллегии и штатных рецензентов вошли авторитетные российские и зарубежные специалисты. Важнейшей задачей журнала является координация теоретических публикаций во всех областях эстетического знания, консолидация интеллектуальных усилий российских эстетиков различных институций, регионов и исследовательских направлений.

Редколлегия журнала надеется, что журнал «*Aesthetica Universalis*», при Вашем заинтересованном и деятельном участии, станет регулярным изданием с интересными и глубокими статьями по различным направлениям эстетических исследований и формам эстетических практик. В журнале предполагаются следующие тематические рубрики: ТЕОРИЯ (актуальные проблемы эстетической теории); ИСТОРИЯ (историко-эстетические исследования); ПЕРЕВОДЫ (введение в русскоязычный оборот ранее непереведенных источников); ОБЗОРЫ (рецензии на публикации, диссертации и дискуссии по эстетике); ПРАКТИКА (описание эстетического опыта во всех проявлениях).

Рукопись подается на русском или английском языке с переводом части аппарата.

Структура рукописи: *имя и фамилия автора* (на русском или английском); *аффилиация автора* (на русском или английском); *город, страна, адрес электронной почты; название статьи* (на русском и английском); *аннотация* объемом 200—300 слов (на каждом языке); *ключевые слова* (на русском и английском, по 5—7 слов на каждом языке); — *текст статьи* (на русском или английском); *список литературы*; ссылки оформляются в Гарвардском стиле.

Адрес редакции: aestheticauniversalis@gmail.com

главный редактор *Aesthetica Universalis*

Editorial

With this issue we start publishing *Aesthetica Universalis*, the theoretical journal established by Department of Aesthetics at Philosophy Faculty of Lomonosov Moscow State University. We suppose our journal to be included into largest international data bases.

The content of every issue will be divided into the following sections: THEORY (the aesthetic field from contemporary theoretical points of view); HISTORY (appearance, transformations and adventures of aesthetic ideas in different times and within different cultures); TRANSLATIONS (significant aesthetic sources translated into Russian); REVIEWS (expositions of remarkable publications, dissertations and conferences on aesthetics); PRACTICES (descriptions of aesthetic experience of different kinds).

Our journal is *bilingual* (English and Russian), it means that all texts will have this quality in their structure. If you write in *English* you do your work the main part of your work (your name, your affiliation, the title, annotation, key words, the very text body, references) in this language but after these mentioned parts you add Russian details of apparatus (the name, the title, annotation and key words). If you write in Russian you do the same job but vice-versa. Your text must be of *no less than 20000 and no more than 40000 characters* including spaces, English and Russian parts in total.

Your text must be organized in the following order:

1. You must put your *name* and your *affiliation* before your text in the language of the main part of your publication, and *e-mail*.
2. Then you put the *title* in the same language.
3. Then the *annotation* in the same language follows, it must consist of 200—300 words.
4. Then you put the *key words* (7—10 ones) in the same language.
5. Then *references* in the language of the main text are going. Our journal supports *Harvard style* of references.
6. Then you put *annotation in the language of translation* (200—300 words). Than you put the *key words in the language of translation*.

Your file must be saved in *Rich Text Format (rtf)*, font *Book Antiqua*, 12 for main the main part of the article (the name, the title, the body of the text) and *Book Antiqua*, 10 for the apparatus (annotations, key words, references). Please, make margins as in this letter and paragraphs as in the model that is following.

THE MIMETIC CREATION OF THE IMAGINARY. ANTHROPOLOGICAL PREREQUISITES OF MIMETIC PROCESSES

Abstract

Young children learn to make sense of the world through mimetic processes. These processes are focused to begin with on their parents, brothers and sisters and people they know well. Young children want to become like these persons. They are driven by the desire to become like them, which will mean that they belong and are part of them and their world. Young children, and indeed humans in general are social beings. They, more than all non-human primates, are social beings who cannot survive without the Other. In mimetic processes the outside world becomes the inner world and the inner world becomes the outside world. The imaginary is developed and the imaginary develops ways of relating to the outside world. In a mimetic loop, this in turn affects the inner world of the imaginary. These processes are sensory and governed by desire. All the senses are involved which means that the imaginary has multiple layers. Since there is an intermingling of images, emotions and language, these processes are rooted in the body and at the same time transcend the body as they become part of the imaginary. Human beings create images of themselves in all cultures and historical periods. They need these images to understand themselves and their relationship to other human beings and to develop social relations and communities. Images of the human being are designs and projections of the human being and his or her relationship to other people and to the world. They are formed to visualize representations of individuals or aspects of them. They arise when we communicate about ourselves. They support us to live with diversities and to develop similarities and feelings of belonging with other people. They are the result of complex anthropological processes, in which social and cultural power structures play an important role.

Key words

Mimesis, images, the imaginary.

Young children learn to make sense of the world through mimetic processes. These processes are focussed to begin with on their parents, brothers and sisters and people they know well. Young children want to become like these persons. They are driven by the desire to become like them, which will mean that they belong and are part of them and their world. Young children, and indeed humans

¹ Christoph Wulf is Professor of Anthropology and Education and a member of the Interdisciplinary Centre for Historical Anthropology, the Collaborative Research Centre (SFB, 1999—2011) «Cultures of Performance», the Cluster of Excellence «Languages of Emotion» (2007—2012) and the Graduate School «InterArts» at Freie Universität Berlin. His books have been translated into more than 15 languages. He is Vice-President of the German Commission for UNESCO. Research stays and invited professorships have included the following locations, among others: Stanford; Tokyo; Kyoto; Beijing; Shanghai; Mysore, Delhi; Paris; Lille, Strasbourg; Modena; Amsterdam; Stockholm; Copenhagen; London; Vienna; Rome, Saint Petersburg, Moscow, Kazan; São Paulo. Major research areas: historical and cultural anthropology, educational anthropology, rituals, gestures, emotions, imagination, intercultural communication, mimesis, aesthetics, epistemology. Christoph Wulf is editor, co-editor and member of the editorial staff of many international journals, and also a member of Aesthetica Universalis International Editorial Council.

in general are social beings. They, more than all non-human primates, are social beings who cannot survive without the Other. There are several anthropological conditions behind this.

One of these is neoteny, or the fact that human beings are born at an embryonic stage in their development. In other words human beings are born unfinished or incomplete. Their development has to take place once their life has started, and for this to happen they need people who are close to them, people they desire and who they want to be like. Unlike other non-human primates and animals, children are not governed by their instincts. They are equipped only with residual instincts which are not strong enough for them to be able to survive if they are not kept alive by the people close to them.

We can see this clearly if we compare a young child to a foal. A foal is capable of living just a few hours after its birth, whereas it takes young human beings years to reach that stage. Neoteny and the decrease in the instincts are inextricably linked. As Philosophical Anthropology has also indicated, this explains why human beings are able to grasp the «suchness» (*Sosein*) of phenomena, in other words the world, whereas animals are only able to perceive an environment determined by their instincts (Wulf 2013a, chap. 2)

It is through mimetic processes that children make their early discoveries of the world. It is not only that children try to become like other people whom they desire. It is also their discovery of the world that is mimetic. These early processes of perceiving the world that are of such central importance in the development of the imaginary, are frequently mimetic. In other words, at a very early stage young children develop an active relationship to the world. They adopt relationships to objects which are conveyed to them largely by the people whom they desire to emulate. For example children follow adults' movements when adults give them a bottle filled with tea. They perceive the objects «bottle» and «tea» and the movement of the person they love giving them something to drink. As children mimetically appropriate the way the adults they love give them the tea, they feel and appropriate both the act of giving the tea and also the warmth and caring this expresses, over and above the act of tea giving. As children appropriate the action there is an interplay between the object that quenches their thirst (the bottle) and the child's appropriation of the emotional aspect of the action, the caring. Young children perceive these processes at an early age, and at this point it is the receptive aspect that is dominant. It is the adults who perform the actions and the children who perceive them. A few months later this changes and the active side of perception becomes more important. A child's perception of the world is socially transmitted very early on. Since the medium for this is culture, the child becomes «encultured» while very young. This happens via the movements of persons close to the child. These movements convey meanings, even if these are not yet conveyed in words. Children understand the gesture of someone giving them tea (Wulf, and Fischer-Lichte 2010). It contains a meaning, even though this meaning is not articulated verbally. This is because gestures, as non-verbal acts, still convey meaning. What conveys the meaning here is the movement of the body, driven by the senses, which children perceive at a very early age and then repeat, also very early on, in mimetic processes (Gebauer, and Wulf 2018).

It is in mimetic processes that children discover the sense of gestural actions, a sense that is implicit and often does not even need to be conveyed because it is has already been conveyed by the body. Such gestural actions form part of our vast silent knowledge, which is so very important in human life but which is often accorded little value in comparison with scientific knowledge which society reveres (Kraus, Budde, Hietzge, and Wulf 2017). Ryle clearly identified the different nature of the knowledge that manifests itself in actions of the body in his distinction between «knowing how» and «knowing that» (Ryle 1990). Learning to ride a bike is a good illustration of this. I can read a whole treatise about what you have to do when riding a bike, but it will be of very little help to me when learning. Learning to ride a bike does not involve «knowing that» but «knowing how». I need to be able to do it, and have to learn it practically, by using my body. There is no other way I can acquire this knowledge, that is far more an ability. Here too, learning to ride a bike is the result

of mimetic processes, processes that have to relate to other people but above all to the movements of our own bodies. This is a kind of mimesis of ourselves where we develop a mimetic relationship to our own behaviour in order to improve it.

Now to return to the mimetic processes that take place in young children, by means of which they develop their imaginary. Even before they reach the age of one, they are able to understand the intentions of the people close to them. If someone points at something, for example, then they follow the gesture of pointing, not stopping at the finger itself, but grasping that the aim of the pointing is an object and not the finger itself. (Tomasello 1999). It is already apparent in one year olds that they are beginning to use mimetic processes to make sense of the world and gradually transform it into their imaginary. Through mimetic processes the outside world becomes their inner world. As non-verbal actions addressed by subjects towards objects, gestures play an important role in conveying emotional caring and attachment. This is because they are demonstrative and at the same time directed towards the other person. In a mimetic process they convey a positive social relationship and a relationship to the objects of a cultural world. Both of these become absorbed into a child's imaginary in the mimetic process, resulting in a complex interlinking of a cultural object (a bottle), the adult's act of caring and the meaning of this interplay for the child.

In his autobiography, «Berlin Childhood around 1900», Walter Benjamin (2006) illustrated how children incorporate their cultural environments in processes of assimilation. In the course of these processes, children assimilate aspects of the parental home, such as the rooms, particular corners, objects and atmospheres. They are incorporated as «imprints» of the images and stored in the child's imaginary world, where they are subsequently transformed into new images and memories that help the child gain access to other cultural worlds. Culture is handed on by means of these processes of incorporating and making sense of cultural products. The mimetic ability to transform the external material world into images, transferring them into our internal worlds of images and making them accessible to others enables individuals to develop their imaginary and to actively shape cultural realities (Gebauer, and Wulf 1998, 2018; Wulf 2002; Wulf, and Zirfas 2014).

Even at the age of one, children develop a considerable ability, though the fact that they are very active, to absorb the world around them in mimetic processes. The ability of a child's body to move around plays an important role in this. This physical moving enables them to alter their relationship to objects in the outside world. Their perspective on the world changes as they move. This applies to the corners where the objects are perceived and even more to the changing bodily encounters with the world. The world is touched by the child's hands and often by the child's whole body. As they gradually feel their way around the world children experience two things. One is the active child's experience of touching the objects. But it is also the discovery that, through the act of touching, the world itself replies. Children now feel the differences in material objects and at the same time experience the world outside them. This dual experience of touching objects and being touched by them is of central importance in the development of the very first elements of a sense of a child's identity. The child now has the dual experience of being active and passive at the same time, an experience which characterises mimetic processes. Children touch the world and are touched back by it. This becomes a cyclical process of mutual discovery, and I cannot overstate how important this is for the development of the child's imaginary.

In mimetic processes the outside world becomes the inner world and the inner world becomes the outside world. The imaginary is developed and the imaginary develops ways of relating to the outside world. Again in a mimetic loop, this in turn affects the inner world of the imaginary. These processes are sensory and governed by desire. All the senses are involved which means that the imaginary has multiple layers. Since there is an intermingling of images, emotions and language, these processes are rooted in the body and at the same time transcend the body as they become part of the imaginary (Wulf 2014; Hüppauf, and Wulf 2009; Paragrapna 2016).

As we read works of literature, it is mimetic processes that bring to life an assemblage of non-sensory words into sensory ideas and emotions and give them meaning. (Benjamin 1980a, 1980b). It is the same with other products of culture that also require mimetic processes for them to come alive. Such processes are particularly important in the transfer of the cultural imaginary from one generation to the next, since these processes require a metamorphosis to keep forms of living, knowledge, art or technology alive. As mimetic processes are not simply methods of copying or producing worlds that have already been symbolically interpreted but also consist in our taking and then incorporating «impressions» of these worlds, these mimetic relationships always contain creative aspects which alter the original worlds. This creates a cultural dynamism between generations and cultures which constantly gives rise to new things.

IMAGES OF THE HUMAN BEING: THE VISUALISATION OF THE INVISIBLE

It is in mimetic processes that images of the outside world are transferred to our imaginary. Our imaginary constructs images which shape the outside world (Wulf 2018). These images also include those we make of ourselves, images in which and by means of which we try to make sense of ourselves. People create images of themselves in all cultures and historical periods. They need these images to communicate about themselves and to understand themselves. Images of the human being are designs and projections of the human being. They are formed in order to visualise representations of the human being or individual aspects of a person. These representations are simplifications of human diversity and complexity in illustrations. A «productive moment» is portrayed here in these representations, as the discussion about the *Laocoön* statue shows. Historical developments and interpretative variants are not displayed in such iconic «productive moments». The special nature of an image lies in the concentration on one moment and in the suggested evidence, but the limits of the iconic representation are also revealed therein. Human images are always simplifications, which, despite their simplifying character, are extremely effective. The power structures of a society which are often difficult to see are incorporated in the construction of the human images. Human images are the result of differentiated inclusion and exclusion processes. Desires, norms and values are conveyed in human images. Human images are aimed at the normalisation of people. Social and cultural institutions, as well as religions, utopias and world views, use human images to portray their conceptions of humans and to embed their ideas in the imaginary and in the actions of humans.

Such human images are clearly expressed, for example in the sculptures of Ancient Greece, in which the ideal of the good and beautiful, the *Kolokagathia*, the unit of physical beauty and spiritual quality, is expressed. Also in the Christian Middle Ages there are human images in which the devout, godly person is represented. The *biblia pauperum* in the churches of the Middle Ages show this clearly. We find representations of godly people subdivided according to status into monks, nobles and peasants, in which the hierarchical structures of the society are also reflected. Nationalism in the 19th century and in the first half of the 20th century highlighted numerous idealising images of, for example, the «Germans» and the «French», which became role models for education and an honourable life. Socialism in the Soviet Union and in Eastern Europe also tried to embed a certain human image in the imagination of the young generation. Today the European Union also endeavours to achieve the human image of a free, independent democratic citizen as a model of human development and education in Europe (Wulf 1995, 1998).

THE IMAGE OF A SUSTAINABLE HUMAN BEING

After the period for the realisation of the millennium objectives set for the developing countries expires in 2015 and succeeds in reducing poverty and illiteracy in many parts of the world,

the community of nations is currently working intensively on developing sustainability goals (for the World Summit in autumn 2015). In this process there are philosophical and anthropological analyses of the ethical questions associated with sustainability, the development and discussion of the feasibility of the sustainability goals, the clarification of the concepts and the consistency of the argumentation and the methodical and argumentative approach. Development is sustainable when it «secures the quality of life of current generations without compromising the ability of future generations to shape their life» (DUK 2014). The sustainability objectives arising from this definition are interrelated with a culture of peace and human rights, cultural diversity and democratic participation and the rule of law. A culture of sustainable development is necessary for the transformation of the economy and society. Future-oriented models, ideas, norms and forms of knowledge are required for its development. These should be supplemented by the development of sustainability values and corresponding attitudes and ways of life. The education for sustainable development also plays an important role here. Without it the initiation of independent action is not possible. The international community of states is looking for a human image, on which representatives from all societies and cultures can agree and which can span the cultural differences as a role model. – It is currently not clear whether such a human image is possible and whether such an image would destroy the cultural diversity between the parts of the world. There is also reasonable doubt as to whether and to what extent such images can be used to level cultural differences between the geographical regions of the world without cultivating tension between them.

DEVELOPMENT AND POWER OF IMAGES OF THE HUMAN BEING

Why do we assume that images of the human being and images produced by the human being are so effective? Why do they have such an influence on the development of societies, communities and individuals? I believe three reasons are of particular importance here:

1) Cultural learning takes place using mimetic processes, i.e. processes of creative imitation (Wulf 2013a; Gebauer and Wulf 2018, 1998). Images play an important role here. This includes images of other people, images of the living environment and human images occurring gradually in synthetic processes. Human images give orientation and meaning. They are shared with other people and create feelings of belonging and togetherness. Herein lies the sustainability of their effect. Images are not easily adopted, but lived and internalised with other people and their interpretations. They occur in action and language games. In contrast to the instincts of animals, they are historically and culturally determined and can be changed.

2) Human images have profound effects because they occur at least partly in childhood and create a sense of being part of a community. They occupy the imaginary and become part of the imagination. They influence our perception of the world, culture and other people and our own self-perception. Human images become part of the person and his imagination and have an influence on his emotions. They are repeated and consolidated by the rhythms and rites of life. Like plants with extended roots, particular and universal human images are fixed in the imagination and gain effect from the connection with already existing ideas and images (Hüppauf, and Wulf 2009).

3) As images of the imagination and the imaginary, human images become part of the body (Wulf 2018; Pragrana 2016). They are inherent and therefore can be difficult to change. Often they consist not only of individual images, but of picture sequences, even of picture networks, with which heterogeneous, sometimes even paradoxical images are «captured». As a result, existing human images are repeatedly confirmed and their importance is reinforced (Wulf 2014).

THE WORLD BECOMES AN IMAGE

A characteristic of modernity is the fact that the world is opposite to man and is perceived as an object and an image. In ancient times, people, animals and the environment were part of living nature, the *Physis*. They were generally perceived as similar to each other. They were stimulated by the power, the dynamis of nature, the *Physis*. This relationship of people to the world was retained in the Middle Ages. Animals, people and world are created by God and have a common creatureliness. In the modern era this relationship of the (Western) human being to the world, to other people and to themselves changes. Nature is no longer experienced as animated. It becomes the object. The people are no longer part of nature or the world created by God, but are opposite it; they measure it and register it as «object». In this process the world becomes an image. With the development of new media this trend increases. Not only the world and the other people are perceived as images, we ourselves are also increasingly perceiving ourselves in the mode of images. The widespread use of digital photography in everyday life and especially the selfies are proof of this (Kontopodis, Varvantakis, and Wulf 2017). Using electronic photos or films we create all important events, and ultimately create an image of ourselves (Wulf 2013a, 2013b).

Human images show the central role images play, and with them the imagination and the imaginary world, for the constitution of the person and his education. They also make it clear how strongly the images are defined by their respective historical and cultural character and how important their research is within the framework of anthropology. Human images are images which the person creates of himself, and whose significance must be understood for his perception of the world, his memories and his future projections. They are generated by social and cultural practices of everyday life and by the arts. Human images become part of the collective and individual social and cultural imaginary world and thus play a part in shaping human activities. The creation of images is a feature, which we share as human beings, whose form, however, is very different in history and in different cultures. As the images and the imaginary world visualise something, which would otherwise remain invisible, their research is an important area of anthropology.

What we describe as an «image» is different, meaning that the spectrum of the term is broad and requires a range of further clarification. Sometimes we mean the result of visual perception processes. Under the influence of neuroscience and its visualisation strategies, the results of the perception with other senses are often even described as «images». We then speak about mental or «inner» images, which bring to mind something which is not actually present. These include, for example, souvenir pictures, which differ to the perceptions due to their vagueness. The same applies to sketches or drafts of future situations, to dreams, hallucinations or visions. Many aesthetic products also take the form of images. They are products of a process aimed at the creation of an image. As metaphors, they are ultimately a constitutive element of language. Creating images, recognising images as images, dealing with images using one's imagination, is a universal capability of humans (Wulf 2014, 2018). However, it varies depending on the historical period and culture. Because which images we see and how we see images is determined by complex historical and cultural processes. How we perceive images and deal with them is also influenced by the unique nature of our life history and subjectivity.

Like all images, human images are the result of energetic processes. They transform the world of objects, actions and other people into images. Using the imagination they are imagined and become part of the collective and individual imaginary world. Many of these processes are mimetic and result in an assimilation to other people, environments, ideas and images. In mimetic processes the outer world becomes the «inner world», which is a world of images (Gebauer and Wulf 2018. 1998). This world of imaginary images plays a part in shaping the outer world. As these images are performative, they contribute to the emergence of actions and to the production and performance of our relationship to other people and to our surrounding world. The imaginary world is the place of the images as such,

the destination of the imagination process generating the images. At the same time, it is the starting point of the mimetic and performative energies of the images.
